Revisioni

L'indice di revisione del catalogo è riportato a pag. 264 Al sito www.bonfiglioli.com sono disponibili i cataloghi con le revisioni aggiornate.

INFORMAZIONI GENERALI

1 SIMBOLOGIA E UNITÀ DI MISURA

Simbolo	Unità di misura	Descrizione	Simbolo	Unità di misura	Descrizione
$A_{N 1,2}$	[N]	Carico assiale nominale	$n_{1,2}$	[min ⁻¹]	Velocità
f_s	–	Fattore di servizio	$P_{1,2}$	[kW]	Potenza
f_T	–	Fattore termico	$P_{N 1,2}$	[kW]	Potenza nominale
f_{TP}	–	Fattore di temperatura	$P_{R 1,2}$	[kW]	Potenza richiesta
i	–	Rapporto di trasmissione	$R_{C 1,2}$	[N]	Carico radiale di calcolo
I	–	Rapporto di intermittenza	$R_{N 1,2}$	[N]	Carico radiale nominale
J_C	[Kgm ²]	Momento di inerzia carico	S	–	Fattore di sicurezza
J_M	[Kgm ²]	Momento di inerzia motore	t_a	[°C]	Temperatura ambiente
J_R	[Kgm ²]	Momento di inerzia riduttore	t_s	[°C]	Temperatura superficiale
K	–	Fattore di accelerazione delle masse	t_o	[°C]	Temperatura dell'olio
K_r	–	Costante di trasmissione	t_f	[min]	Tempo di funzionamento a carico costante
$M_{1,2}$	[Nm]	Coppia	t_r	[min]	Tempo di riposo
$M_{C 1,2}$	[Nm]	Coppia di calcolo	η_d	–	Rendimento dinamico
$M_{n 1,2}$	[Nm]	Coppia nominale	η_s	–	Rendimento statico
$M_{r 1,2}$	[Nm]	Coppia richiesta			

₁ valore riferito all'albero veloce

₂ valore riferito all'albero lento

Questo simbolo indica informazioni tecniche di particolare importanza da non trascurare.

Questo simbolo riporta i riferimenti angolari per l'indicazione della direzione del carico radiale (l'albero è visto di fronte).

Questo simbolo indica situazioni di grave pericolo che, se trascurate, possono mettere seriamente a rischio la salute e la sicurezza delle persone.

Simbolo riferito al peso dei riduttori e dei motoriduttori. I valori riportati nelle tabelle dei motoriduttori sono comprensivi sia del peso del motore a 4 poli sia del peso del lubrificante contenuto, qualora previsto da BONFIGLIOLI RIDUTTORI.

Il simbolo identifica la pagina alla quale può essere reperita l'informazione.

2 DEFINIZIONI

2.1 COPPIA

Coppia nominale M_{n2} [Nm]

È la coppia trasmissibile in uscita con carico continuo uniforme, riferita alla velocità in ingresso n_1 e a quella corrispondente in uscita n_2 .

È calcolata in base ad un fattore di servizio $f_s = 1$.

Coppia richiesta M_{r2} [Nm]

Rappresenta la coppia richiesta dall'applicazione e dovrà sempre essere uguale o inferiore alla coppia in uscita nominale M_{n2} del riduttore.

Coppia di calcolo M_{c2} [Nm]

È il valore di coppia da utilizzare per la selezione del riduttore considerando la coppia richiesta M_{r2} e il fattore di servizio f_s ed è dato dalla formula:

$$M_{c2} = M_{r2} \times f_s \leq M_{n2} \quad (1)$$

2.2 POTENZA

Potenza nominale in entrata P_{n1} [kW]

Il parametro è riscontrabile nelle tabelle dei dati tecnici nominali e rappresenta la potenza applicabile al riduttore in relazione alla velocità di comando n_1 e al fattore di servizio $f_s = 1$.

2.3 RENDIMENTO

Rendimento dinamico [η_d]

Si definisce come il rapporto fra la potenza in uscita P_2 e quella in entrata P_1 :

$$\eta_d = \frac{P_2}{P_1} \quad (2)$$

È opportuno evidenziare che i valori di coppia nominale M_{n2} sono calcolati tenendo conto del rendimento dinamico η_d che si produce al termine della fase di rodaggio dei riduttori.

Dopo il rodaggio si ha anche una riduzione e infine una stabilizzazione della temperatura di funzionamento. La temperatura sotto carico è influenzata dal tipo di servizio e dalla temperatura ambiente, riferirsi al capitolo "TEMPERATURE LIMITE AMMESSE" per indicazioni sui valori consentiti. Se c'è motivo di attendersi temperature di funzionamento vicine al limite massimo consentito, è opportuno equipaggiare il riduttore di anelli di tenuta in fluoro-elastomero, specificando nell'ordinativo l'opzione **PV**.

Rendimento statico [η_s]

È il rendimento applicabile all'avviamento del riduttore. Il parametro non è generalmente rilevante nel caso di ingranaggi elicoidali, ma deve essere tenuto in particolare considerazione nella scelta di motorizzazioni a vite senza fine, quando questi operano con un tipo di servizio intermittente (es. Sollevamenti).

2.4 RAPPORTO DI RIDUZIONE [i]

Il valore del rapporto di riduzione della velocità, identificato con il simbolo [i], è espresso tramite il rapporto fra le velocità all'albero veloce e lento del riduttore e riassunto nell'espressione:

$$i = \frac{n_1}{n_2} \quad (3)$$

2.5 MOMENTO D'INERZIA J_r [kgm²]

I momenti d'inerzia indicati a catalogo sono riferiti all'albero veloce del riduttore e pertanto, nell'accoppiamento con un motore elettrico, il loro valore si somma semplicemente a quello del motore stesso.

2.6 FATTORE DI SERVIZIO [f_s]

Il fattore di servizio è il parametro che traduce in un valore numerico la gravosità del servizio che il riduttore è chiamato a svolgere, tenendo conto, benché con inevitabile approssimazione, del funzionamento giornaliero, della variabilità del carico e di eventuali sovraccarichi, connessi con la specifica applicazione del riduttore. Nel grafico seguente riportato il fattore di servizio si ricava, dopo aver selezionato la colonna relativa alle ore di funzionamento giornaliero, per intersezione fra il numero di avviamenti orari e una fra le curve K1, K2 e K3.

Le curve K sono associate alla natura del servizio (approssimativamente: uniforme, medio e pesante) tramite il fattore di accelerazione delle masse K , legato al rapporto fra le inerzie delle masse condotte e del motore. Indipendentemente dal valore così ricavato del fattore di servizio, segnaliamo che esistono applicazioni fra le quali, a puro titolo di esempio i sollevamenti, per le quali il cedimento di un organo del riduttore potrebbe esporre il personale che opera nelle immediate vicinanze a rischio di ferimento. Se esistono dubbi che l'applicazione possa presentare questa criticità vi invitiamo a consultare preventivamente il ns. Servizio Tecnico.

Fattore di accelerazione delle masse, [K]

Il parametro serve a selezionare la curva relativa al particolare tipo di carico. Il valore è dato dal rapporto:

$$K = \frac{J_c}{J_m} \quad (4)$$

$$K = \frac{J_c}{J_m}$$

→

$J_c =$ Momento d'inerzia delle masse comandate, riferito all'albero motore

$J_m =$ Momento d'inerzia del motore

$K \leq 0,25$	→ K1	Carico uniforme
$0,25 < K \leq 3$	→ K2	Carico con urti moderati
$3 < K \leq 10$	→ K3	Carico con forti urti
$K > 10$	→	Consultare il Servizio Tecnico di Bonfiglioli

3 TEMPERATURE LIMITE AMMESSE

Simbolo	Descrizione / Condizione	Valore (*)	
		Olio Sintetico	Olio Minerale
t_a	Temperatura ambiente		
$t_{au \min}$	Temperatura ambiente minima di utilizzo	-30°C	-10°C
$t_{au \max}$	Temperatura ambiente massima di utilizzo	+50°C	+40°C
$t_{as \min}$	Temperatura ambiente minima di stoccaggio	-40°C	-10°C
$t_{as \max}$	Temperatura ambiente massima di stoccaggio	+50°C	+50°C
t_s	Temperatura superficiale		
$t_{s \min}$	Temperatura minima superficiale del riduttore per avviamento con carico parziale (#)	-25°C	-10°C
$t_{sc \min}$	Temperatura minima superficiale del riduttore per avviamento a pieno carico	-10°C	-5°C
$t_{s \max}$	Temperatura massima superficiale della cassa per utilizzo in modalità di funzionamento continuo a regime (rilevata in prossimità della zona veloce in entrata)	+100°C	+100°C (@)
t_o	Temperatura dell'olio		
$t_{o \max}$	Temperatura massima dell'olio per utilizzo in modalità di funzionamento continuo a regime	+95°C	+95°C (@)

(*) = Per i valori minimi e massimi specifici per le diverse viscosità d'olio riferirsi alla tabella "Scelta della viscosità ottimale dell'olio". Per i valori di $t_a < -20^\circ\text{C}$ e $t_s, t_o > 80^\circ\text{C}$, scegliere (per quanto consentito in fase di configurazione prodotto) la tipologia di tenuta nel materiale più idoneo al tipo di applicazione. Se necessario contattare il Servizio Tecnico Bonfiglioli.

(@) = Per i valori di $t_s, t_o > 80^\circ\text{C}$ e $< 95^\circ\text{C}$, è sconsigliato l'utilizzo per funzionamenti in continuo.

(#) = Per l'avviamento a pieno carico è consigliabile l'uso di una rampa graduale e prevedere un maggior assorbimento del motore. Se necessario contattare il Servizio Tecnico Bonfiglioli.

4 SELEZIONE

4.1 Selezione di un motoriduttore

a) Determinare il fattore di servizio f_s come precedentemente Descritto.

b) Ricavare la potenza richiesta all'albero veloce del riduttore.

$$P_{r1} = \frac{M_{r2} \times n_2}{9550 \times \eta_d} \quad [\text{kW}] \quad (5)$$

c) Nel capitolo: «Dati tecnici motoriduttori» individuare la tabella relativa ad una potenza motore normalizzata P_n tale che:

$$P_n \geq P_{r1} \quad (6)$$

Se non diversamente indicato, la potenza P_n dei motori riportata a catalogo si riferisce al servizio continuo S1. Per i motori utilizzati in condizioni diverse da S1, sarà necessario identificare il tipo di servizio previsto con riferimento alle Norme CEI 2-3/IEC 34-1. In particolare, per i servizi da S2 a S8 e per le grandezze motore uguali o inferiori a 132, è possibile ottenere una maggiorazione della potenza rispetto a quella prevista per il servizio continuo, pertanto la condizione da soddisfare sarà:

$$P_n \geq \frac{P_{r1}}{f_m} \quad (7)$$

Il fattore di maggiorazione f_m è ricavabile dalla tabella che segue.

Rapporto di intermittenza

$$I = \frac{t_f}{t_f + t_r} \times 100 \quad (8)$$

t_f =tempo di funzionamento a carico costante

t_r =tempo di riposo

	SERVIZIO						
	S2			S3*			S4 - S8
	Durata del ciclo [min]			Rapporto di intermittenza (I)			Interpellare il Servizio Tecnico di Bonfiglioli Riduttori
	10	30	60	25%	40%	60%	
f_m	1.35	1.15	1.05	1.25	1.15	1.1	

* La durata del ciclo dovrà comunque essere uguale o inferiore a 10 minuti; se superiore interpellare il Servizio Tecnico di Bonfiglioli Riduttori.

Nella sezione relativa alla potenza installata P_n selezionare infine il motoriduttore che sviluppa la velocità di funzionamento più prossima alla velocità n_2 desiderata e per il quale il fattore di sicurezza S sia uguale, o superiore, al fattore di servizio f_s .

$$S \geq f_s \quad (9)$$

Il fattore di sicurezza è così definito:

$$S = \frac{M_{n2}}{M_2} = \frac{P_{n1}}{P_1} \quad (10)$$

Nelle tabelle di selezione motoriduttori gli abbinamenti sono sviluppati con motori a 2, 4 e 6 poli alimentati a 50 Hz.

Per velocità di comando diverse da queste, effettuare la selezione con riferimento ai dati nominali forniti per i riduttori.

4.2 Selezione di un riduttore

- Determinare il fattore di servizio f_s .
- Determinare la coppia di calcolo M_{c2} dalla relazione:

$$M_{c2} = M_{r2} \times f_s \quad (11)$$

- Ricavare il rapporto di trasmissione:

$$i = \frac{n_1}{n_2} \quad (12)$$

- Nel capitolo: «Dati tecnici riduttori» individuare la grandezza di riduttore il quale, per la velocità di comando n_1 e per il rapporto $[i]$ più prossimo a quello calcolato, offra una coppia nominale che soddisfi la seguente condizione:

$$M_{n2} \geq M_{c2} \quad (13)$$

Verificare l'applicabilità del motore selezionato al paragrafo: «Predisposizioni motore».

5 VERIFICHE

Effettuata la selezione del riduttore, o motoriduttore, è opportuno procedere alle seguenti Verifiche:

a) Coppia massima

Generalmente la coppia massima (intesa come punta di carico istantaneo) applicabile al riduttore non deve superare il 150% della coppia nominale M_{n2} ; sono ammessi valori di picco fino al 300% previa valutazione ed approvazione del Servizio Tecnico Bonfiglioli.

Per i motori trifase a doppia polarità è necessario rivolgere particolare attenzione alla coppia di commutazione istantanea che viene generata durante la commutazione dall'alta velocità alla bassa in quanto può essere decisamente più elevata della coppia massima stessa.

Un metodo semplice ed economico per ridurre tale coppia è quello di alimentare solo due fasi del motore durante la commutazione (il tempo di alimentazione a due fasi può essere regolato mediante un relè a tempo):

Coppia di commutazione	
$Mg_2 = 0.5 \times Mg_3$	
Mg_2	Coppia di commutazione alimentando 2 fasi
Mg_3	Coppia di commutazione alimentando 3 fasi

b) Carichi radiali

Verificare che i carichi radiali Agenti sugli alberi di entrata e/o uscita rientrino nei valori di catalogo ammessi. Se superiori, aumentare la grandezza del riduttore oppure modificare la supportazione del carico.

Ricordiamo che tutti i valori indicati nel catalogo si riferiscono a carichi agenti sulla mezzzeria della sporgenza dell'albero in esame per cui, in fase di verifica, è indispensabile tenere conto di questa condizione provvedendo, se necessario, a determinare con le apposite formule il carico ammissibile alla distanza x a cui si applica la risultante del carico radiale.

c) Carichi assiali

Anche gli eventuali carichi assiali dovranno essere confrontati con i valori ammissibili.

Se si è in presenza di carichi assiali molto elevati o combinati con carichi radiali, si consiglia di interpellare il ns. Servizio Tecnico.

d) Avviamenti orari

Per servizi diversi da S1, con un numero rilevante di inserzioni/ora si dovrà tener conto di un fattore Z (determinabile con le indicazioni riportate nel capitolo dei motori) il quale definisce il numero max. di avviamenti specifico per l'applicazione in oggetto.

6 INSTALLAZIONE

6.1 Specifiche di carattere Generale

a) Assicurarsi che il fissaggio del riduttore sia stabile onde evitare qualsiasi vibrazione.

Se si prevedono urti, sovraccarichi prolungati o possibili bloccaggi installare giunti idraulici, frizioni, limitatori di coppia, ecc.

- b) Prima della eventuale verniciatura proteggere le superfici lavorate e il bordo degli anelli di tenuta per evitare che il solvente venga a contatto con la gomma, pregiudicando l'integrità del paraolio stesso.
- c) Gli organi che vanno calettati sugli alberi di uscita del riduttore devono essere lavorati con tolleranza ISO H7 per evitare accoppiamenti troppo bloccati che, in fase di montaggio potrebbero danneggiare irreparabilmente il riduttore stesso. Inoltre, per il montaggio e lo smontaggio di tali organi si consiglia l'uso di adeguati tiranti ed estrattori utilizzando il foro filettato posto in testa alle estremità degli alberi.
- d) Le superfici di contatto dovranno essere pulite e trattate con adeguati protettivi prima del montaggio, onde evitare l'ossidazione e il conseguente bloccaggio delle parti.
- e) Prima della messa in servizio del riduttore accertarsi che la macchina che lo incorpora sia in regola con le disposizioni della Direttiva Macchine 2006/42/CE, e successivi aggiornamenti.
- f) Prima della messa in funzione della macchina, accertarsi che la posizione del livello del lubrificante sia conforme alla posizione di montaggio del riduttore e che la viscosità sia adeguata.
- g) Nel caso di installazione all'aperto prevedere adeguate protezioni e/o carterature allo scopo di evitare l'esposizione diretta agli agenti atmosferici e alla radiazione solare.

6.2 Messa in servizio riduttori serie W

I gruppi W 63, W 75 e W 86 sono forniti di un coperchio laterale orientabile, dotato di un tappo cieco per esigenze di trasporto.

Prima della messa in servizio dell'apparecchiatura questo deve essere sostituito con il tappo di sfiato che è fornito a corredo.

Vedi figura:

Nell'orientamento B6 invece il tappo chiuso NON dovrà essere sostituito con il tappo di sfiato.

7 LUBRIFICAZIONE

I riduttori forniti con lubrificazione permanente non necessitano di sostituzioni periodiche dell'olio. Per gli altri si consiglia di consultare il Manuale d'Uso e Manutenzione disponibile al sito www.bonfiglioli.com per le indicazioni sui controlli periodici del livello dell'olio e sulla sua sostituzione. Evitare di miscelare oli a base minerale con oli sintetici e/o marche differenti. È buona norma comunque controllare il livello una volta al mese per funzionamento intermittente, o più frequentemente, per funzionamento in continuo, e aggiungere olio se necessario.

7.1 Scelta della viscosità ottimale dell'olio (dati riferiti ad oli Shell)

		Temperatura ambiente di lavoro [C°]																		
		-40	-35	-30	-25	-20	-15	-10	-5	0	+5	+10	+15	+20	+25	+30	+35	+40	+45	+50

□ Limiti di impiego consigliati.

⊘ Limiti di impiego consentiti. ☎

⊘ Limiti di impiego non consentiti.

* = Si suggerisce un avviamento graduale e prevedere un maggior assorbimento del motore.

Se necessario e/o nel caso di carichi impulsivi, contattare il Servizio Tecnico Bonfiglioli ☎

7.2 Lubrificazione riduttori W e VF

I gruppi VF 27 ... VF 49, W 63 ... W 86 sono normalmente consegnati con carica di lubrificante del tipo "long life" dalla fabbrica, o dalla rete di vendita ufficiale. Su richiesta gli stessi riduttori possono essere forniti privi di lubrificante, specificando per questi l'opzione **SO**. L'applicabilità dell'opzione è descritta nel capitolo "OPZIONI RIDUTTORE". I gruppi VF 130 ... VF 250 e W 110 sono normalmente forniti privi di lubrificante e sarà cura dell'utilizzatore riempirli di olio prima della messa in servizio. Per questi stessi gruppi è disponibile l'opzione **LO** che, qualora specificata in fase di ordinativo, garantisce il primo riempimento in fabbrica con lubrificante sintetico, in quantità dipendente dalla posizione di montaggio. L'applicabilità dell'opzione è descritta nel capitolo "OPZIONI RIDUTTORE". I riduttori combinati serie VF/VF, VF/W e W/VF sono costituiti da due unità distinte lubrificate autonomamente. Per le tavole di riferimento della collocazione dei tappi di servizio e delle quantità di lubrificante, riferirsi al Manuale Uso e Manutenzione (disponibile su www.bonfiglioli.com). Il lubrificante "long life" fornito di serie è di natura sintetica e, a meno di contaminazione dall'esterno, non richiede sostituzioni periodiche per tutto l'arco di vita del riduttore.

8 STOCCAGGIO

Il corretto stoccaggio dei prodotti richiede l'esecuzione delle seguenti attività:

- a) Escludere aree all'aperto, zone esposte alle intemperie o con eccessiva umidità.
- b) Interporre sempre tra il pavimento ed i prodotti, pianali lignei o di altra natura, atti ad impedire il diretto contatto col suolo.
- c) Per periodi di stoccaggio e soste prolungate le superfici interessate agli accoppiamenti quali flange, alberi e giunti devono essere protette con idoneo prodotto antiossidante (Mobilarma 248 o equivalente). In questo caso i riduttori dovranno essere posizionati con il tappo di sfiato nella posizione più alta e riempiti interamente d'olio. Prima della loro messa in servizio nei riduttori dovrà essere ripristinata la corretta quantità, e il tipo di lubrificante.

9 CONDIZIONI DI FORNITURA

I riduttori vengono forniti come segue:

- a) predisposti per essere installati nella posizione di montaggio come specificato in fase di ordine;
- b) collaudati secondo specifiche Interne;
- c) superfici di accoppiamento non verniciate;
- d) esecuzioni predisposte per l'attacco motore complete di viti e dadi per il fissaggio del motore stesso;
- e) alberi protetti da guaine o cappellotti in plastica per le esigenze del trasporto;
- f) provvisti di golfare di sollevamento (dove previsto).

RIDUTTORI A VITE SENZA FINE

10 CARATTERISTICHE COSTRUTTIVE

10.1 Caratteristiche salienti comuni a tutti i riduttori a vite Bonfiglioli

- Albero lento cavo simmetrico per fissaggio bilaterale del riduttore e degli alberi lenti riportati (disponibili come accessorio).
- Ingranaggi a vite senza fine rettificati e lavorazioni meccaniche di precisione consentono elevati rendimenti e grande silenziosità nel funzionamento.
- Numerose opzioni per il fissaggio del riduttore sfruttando le configurazioni con piedi, con flangia, o pendolare (con braccio di reazione opzionale).
- Estesa possibilità di personalizzazione ricorrendo alla lista delle opzioni disponibili.

10.2 Caratteristiche specifiche dei gruppi tipo VF

- Casse in Alluminio pressofuso per VF27, VF30, VF44 e VF49. Cassa in ghisa per gruppi da VF130 a VF250. Questi ultimi sono verniciati con polveri epossidiche termoindurenti.

10.3 Caratteristiche specifiche dei gruppi tipo W

- Cassa monoblocco in Alluminio, rigida e precisa.
- Grande versatilità e flessibilità nell'applicazione, data dalla forma cubica e dalle numerose superfici lavorate e disponibili per il fissaggio del riduttore, o di organi accessori.
- Configurazione motoriduttore integrale particolarmente compatta, leggera ed economica.
- Anello di tenuta su albero veloce dei gruppi W63, W75 e W86 collocato in posizione interna e con mescola in fluoro-elastomero per migliorate condizioni di funzionamento e durata.

11 FORME COSTRUTTIVE

14 OPZIONI RIDUTTORE

SO

I riduttori tipo VF 30 ... VF 49, W 63 ... W 86, solitamente riempiti in fabbrica di lubrificante, sono in questo caso forniti privi di olio.

LO

I riduttori delle grandezze da VF 130 a VF 250 e W 110, solitamente sprovvisti di lubrificante, sono richiesti con olio sintetico del tipo correntemente utilizzato da BONFIGLIOLI RIDUTTORI e riempiti in accordo alla posizione di montaggio specificata.

L'applicabilità dell'opzione LO è descritta nella tabella seguente.

	LO					
	Posizione di montaggio					
	B3	B6	B7	B8	V5	V6
W 110 U-UF-UFC	X	X	X	X	●	●
VF 130 A-N-P-F-FC	X	X	X	X	●	●

VF 250 A-N-P	X	●	●	X	●	●
VF 250 V	●	●	●	●	X	X

RB

Albero veloce sporgente sul lato opposto comando (escluso VF 27).

RBO

Albero veloce sporgente sul 2° riduttore (solo per esecuzioni combinate).

Dimensioni albero sporgente (opzioni RB e RBO)							
		F	F1	F2	F3	F4	V
	VF	30	9	10.2	3	20	—
	VFR	44	11	12.5	4	30	—
	VF/VF	49	16	18	5	40	M6
	W	63	18	20.5	6	40	M6
	WR	75	19	21.5	6	40	M6
	VF/W	86	25	28	8	50	M8
VF 44, VFR 44		110	25	28	8	60	M8
	VF	130	30	33	8	60	M8
	VFR	150	35	38	10	65	M8
	W/VF	185	40	43	12	70	M8
		210	48	51.5	14	82	M16x40
	250	55	59	16	82	M16x40	

Per VF 210 e VF 250, nelle forme costruttive **A** e **P**, normalmente viene montata la ventola di raffreddamento; con l'opzione **RB** non è possibile applicarla.

VV

Anello di tenuta in fluoro-elastomero sull'albero veloce. Disponibile per W110 e per gruppi serie VF, ad esclusione di VF 30 con opzione RB e VF 30_HS.

PV

Fornitura di anelli di tenuta in fluoro-elastomero sia sull'albero lento sia sull'albero veloce, ad esclusione di VF 30 con opzione RB, e VF 30_HS.

KA

Kit piedi W 63...W 110 per intercambiabilità con gruppi equivalenti VF_A.

KV

Kit piedi W 63...W 110 per intercambiabilità con gruppi equivalenti VF_V (esclusi W con opzione RB e W 110 in posizione di montaggio B6).

AO

Albero su lato opposto a standard (VF 27).

PROTEZIONE SUPERFICIALE

I riduttori, che laddove non viene richiesta una classe di protezione specifica, nelle zone verniciate (ferrose) rispettano come requisito minimo la classe di protezione C2 (UNI EN ISO 12944-2), sono forniti con protezione superficiale **C3** e **C4** per una migliore resistenza alla corrosione atmosferica, ottenute mediante verniciatura del gruppo completo.

PROTEZIONE SUPERFICIALE	Ambienti tipici	Temperatura superficiale max.	Classe di corrosività secondo UNI EN ISO 12944-2
C3	Ambienti urbani ed industriali, con umidità relativa dell'aria max. 100% (inquinamento ambientale medio)	120°C	C3
C4	Aree industriali, zone costiere, impianti chimici, con umidità relativa dell'aria max. 100% (inquinamento ambientale alto)	120°C	C4

I riduttori previsti con le protezioni opzionali **C3** e **C4** sono disponibili in diverse tinte.

Se non specificata nessuna tinta (vedere opzione "VERNICIATURA") la fornitura viene eseguita con la tinta RAL7042.

A richiesta sono fornibili riduttori per classe di corrosività **C5** secondo UNI EN ISO 12944-2, contattando il ns. Servizio tecnico-Commerciale.

VERNICIATURA

I riduttori previsti con le protezioni opzionali C3 e C4 sono disponibili in diverse tinte, secondo la tabella seguente.

VERNICIATURA	Colore	Catalogazione RAL
RAL7042*	Grigio traffico A	7042
RAL5010	Blu genziana	5010
RAL9005	Nero intenso	9005
RAL9006	Alluminio brillante	9006
RAL9010	Bianco puro	9010

* Colore di fornitura standard se non specificato diversamente

NOTA - L'opzione "VERNICIATURA" è configurabile esclusivamente in abbinamento con l'opzione "PROTEZIONE SUPERFICIALE".

PROVE DOCUMENTALI

AC - Attestato di conformità

Documento il cui rilascio attesta la conformità del prodotto all'ordinativo e la costruzione dello stesso in conformità alle procedure standard di processo e di controllo previste dal sistema di Qualità Bonfiglioli Riduttori.

CC - Certificato di collaudo

La specifica comporta la conduzione di verifiche di conformità all'ordine, controlli visivi generali e verifiche strumentali delle dimensioni di accoppiamento. Sono inoltre condotti controlli generali di funzionamento a vuoto e verifiche della funzionalità delle guarnizioni di tenuta in modalità statica e in funzionamento. Il collaudo si applica ad un campione statistico del lotto di spedizione.

Opzioni motori

Per informazioni sulle opzioni, consultare i relativi capitoli nella sezione Motori Elettrici.

15 POSIZIONI DI MONTAGGIO E ORIENTAMENTO MORSETTIERA

Gli orientamenti delle morsettiere dei motori sono identificati osservando il motore dal lato ventola; l'orientamento pre-impostato in fabbrica è evidenziato in nero (W).

Le posizioni morsettieria illustrate non sono valide per VFR 44. Fare riferimento alla pag. 21 e alle pag. 116-117 per la designazione e l'identificazione della forma costruttiva.

Posizione angolare leva di sblocco freno.

Nei motori autofrenanti, la leva di sblocco freno (se richiesta) ha l'orientamento standard a 90° rispetto alla morsettieria (posizione AB); specificare con relative opzioni qualora l'orientamento desiderato sia diverso.

Nelle pagine seguenti sono descritte le posizioni di montaggio dei riduttori tipo VF e W.

Per i riduttori combinati tipo VF/VF, VF/W e W/VF le posizioni di montaggio si riferiscono al secondo riduttore (lato macchina), per il primo riduttore (lato ingresso) fare riferimento al capitolo "Esecuzione di montaggio".

16 CARICHI RADIALI

16.1 Forza risultante sull'albero

Organi di trasmissione calettati sugli alberi di ingresso e/o di uscita del riduttore generano forze la cui risultante agisce in senso radiale sull'albero stesso.

L'entità di questi carichi deve essere compatibile con la capacità di sopportazione del sistema albero-cuscinetti del riduttore, in particolare il valore assoluto del carico applicato (R_{c1} per albero di ingresso, R_{c2} per albero di uscita) deve essere inferiore al valore nominale (R_{n1} per albero di ingresso, R_{n2} per albero di uscita) riportato nelle tabelle dati tecnici.

Il procedimento sotto descritto si applica indifferentemente all'albero veloce o all'albero lento avendo l'avvertenza di utilizzare le costanti relative all'albero interessato dal calcolo.

Il carico generato da una trasmissione esterna può essere calcolato, con buona approssimazione, tramite la formula seguente:

$$R_c = \frac{2000 \times M \times K_r}{d}$$

$K_r = 1$		M [Nm]	
$K_r = 1.25$		d [mm]	
$K_r = 1.5 - 2.0$			

16.2 Verifica sopportazione radiale

16.3 Costanti del riduttore

	Albero lento		$R_{n2} \text{ max}$ [N]
	a	b	
VF 27	56	44	600

VF 250 - VFR 250 - W/VF 130/250	334	252	52000

17 CARICHI ASSIALI

I valori di carico assiale ammissibile sugli alberi veloce $[A_{n1}]$ e lento $[A_{n2}]$ si possono ricavare con riferimento al corrispondente valore di carico radiale $[R_{n1}]$ e $[R_{n2}]$ tramite le espressioni che seguono:

$$\begin{aligned} A_{n1} &= R_{n1} \times 0,2 \\ A_{n2} &= R_{n2} \times 0,2 \end{aligned} \quad (14)$$

I valori di carico assiale ammissibile così calcolati si riferiscono al caso di forze assiali agenti contemporaneamente ai carichi radiali nominali.

Nel solo caso in cui il valore del carico radiale agente sull'albero del riduttore sia nullo, si può considerare il carico assiale ammissibile $[A_n]$ pari al 50% del valore di carico radiale ammissibile $[R_n]$ sullo stesso albero.

In presenza di carichi assiali eccedenti il valore ammissibile, o di forze assiali fortemente prevalenti sui carichi radiali, è consigliabile contattare il Servizio Tecnico di Bonfiglioli Riduttori per una verifica puntuale.

17.1 Carichi assiali massimi ammissibili nella forma costruttiva FR

Per soddisfare le applicazioni che richiedono dei carichi assiali molto elevati, è disponibile la forma costruttiva FR prevista nelle grandezze VF 130, VF 150 e VF 185. Questa forma costruttiva, le cui dimensioni esterne sono identiche a quelle della forma FC, può sopportare i carichi assiali (notevolmente superiori a quelli ammessi dalle forme standard) riportati nella tabella seguente riferiti al rapporto di trasmissione [i] ed al senso di rotazione +/- dell'albero lento.

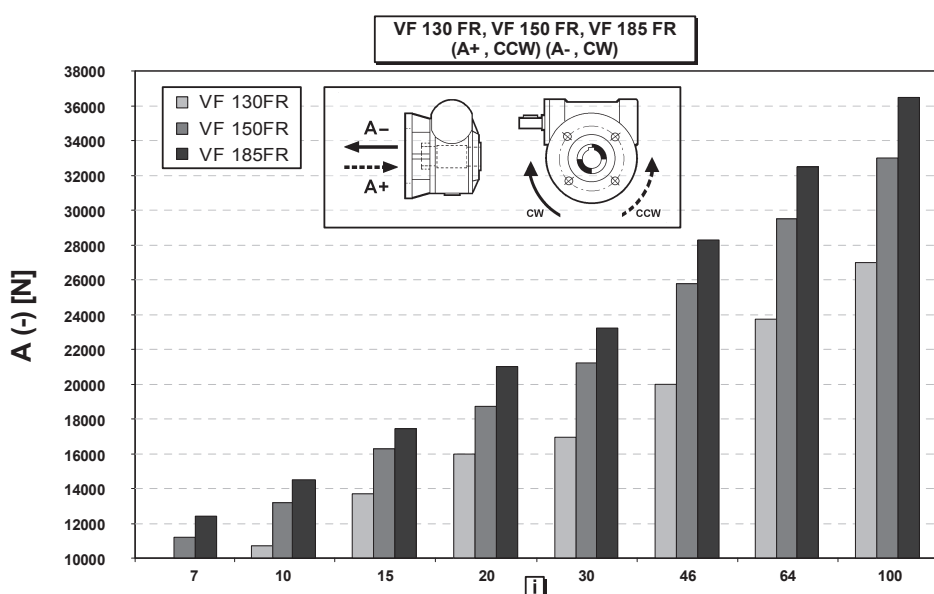

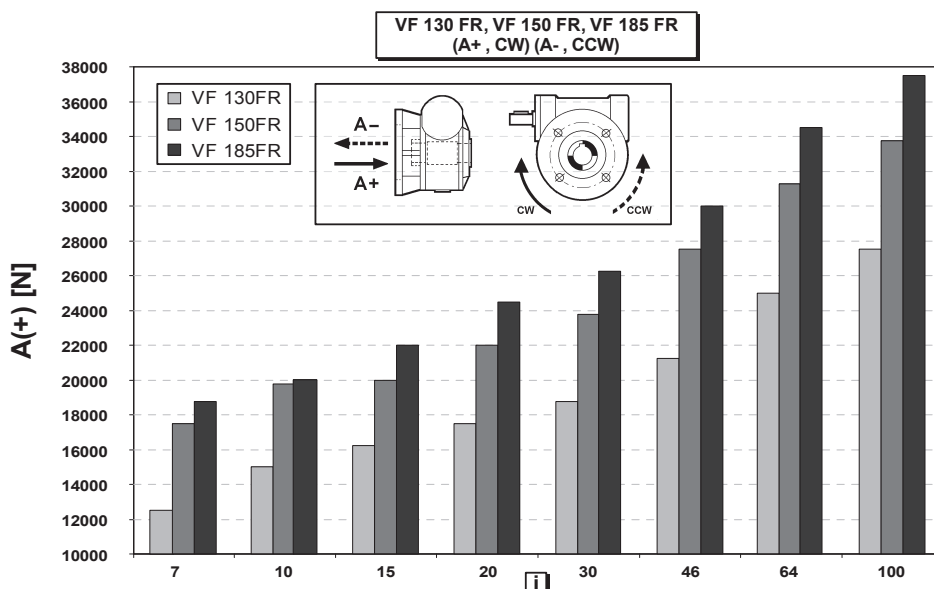

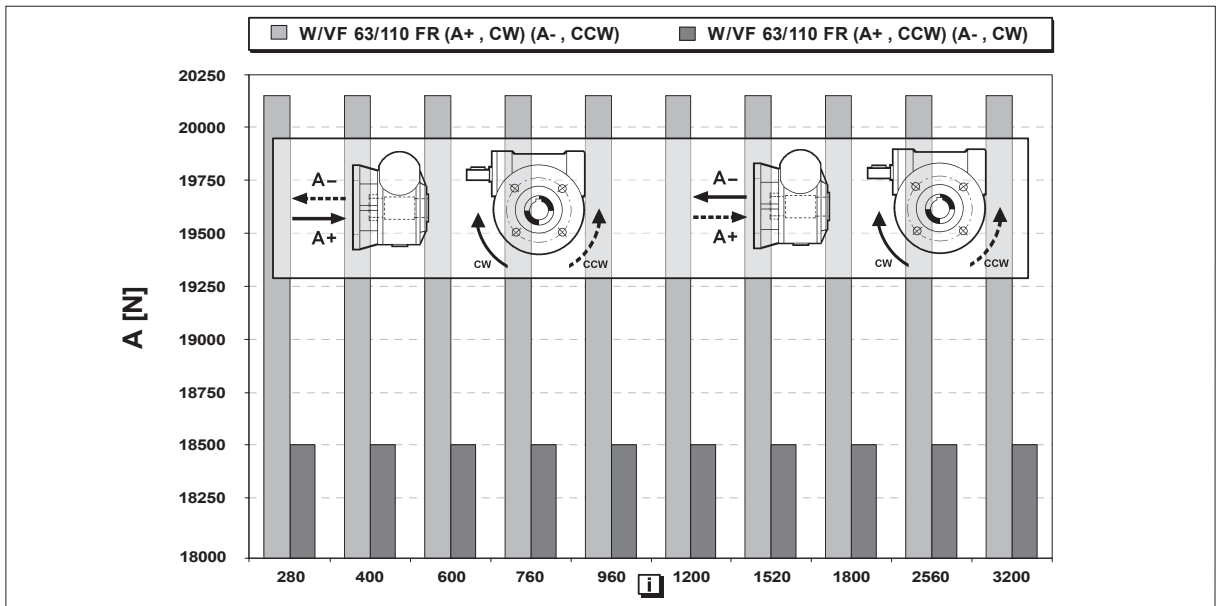

A+ = Carico assiale in compressione

A- = Carico assiale in trazione

CW = Rotazione oraria

CCW = Rotazione antioraria

18 RENDIMENTO

Il rendimento $[\eta]$ dipende dai seguenti parametri:

- angolo d'elica dell'ingranaggio
- velocità di comando
- rodaggio dell'ingranaggio

A tale proposito è utile ricordare che il valore ottimale si manifesta dopo alcune ore di rodaggio e viene raggiunto successivamente nei riduttori funzionanti a regime come illustrato nella tabella sotto riportata, per cui in determinate applicazioni dove è previsto un servizio intermittente (sollevamenti, azionamenti, ecc.) è necessario incrementare adeguatamente la potenza del motore al fine di compensare il basso rendimento che si ha nel riduttore all'avviamento.

I valori di coppia nominale M_{n2} riportati a catalogo sono riferiti al funzionamento a regime, dopo rodaggio. La tabella riporta, a titolo indicativo, il tempo necessario per raggiungere il massimo valore di rendimento dinamico.

19 IRREVERSIBILITÀ

Alcune applicazioni possono comportare occasionalmente la trasmissione del moto retrogrado tramite l'albero lento, mentre altre impongono che il carico sia trattenuto in posizione dal motoriduttore, anche in assenza di alimentazione elettrica.

Alcuni gruppi a vite senza fine offrono la caratteristica di essere irreversibili e il parametro che ne influenza maggiormente questa prestazione è il rendimento.

In particolare il rendimento statico η_s è responsabile della irreversibilità statica (passaggio attraverso una posizione di sosta), mentre il rendimento dinamico η_d è responsabile della eventuale irreversibilità dinamica (moto continuato nella stessa direzione).

L'irreversibilità può esprimersi in misura diversa con i rapporti più lunghi ($i=64$ e superiori) ad offrire una irreversibilità sempre maggiore.

19.1 Irreversibilità statica

Con questa condizione non si può avere la trasmissione del moto con comando dall'asse lento senza escludere però dei ritorni lenti nel caso in cui il gruppo sia sottoposto a vibrazioni. La condizione teorica perchè si verifichi la irreversibilità statica è la seguente:

$$\eta_s < 0.4 - 0.5 \quad (15)$$

dove η_s rappresenta il rendimento statico (valore riportato nelle tabelle dei dati tecnici dei riduttori). Ovviamente, per soddisfare la condizione inversa, cioè la reversibilità statica, si dovrà verificare che:

$$\eta_s > 0.5 \quad (16)$$

19.2 Irreversibilità dinamica

La condizione è influenzata direttamente dalla velocità di rotazione, dal rendimento e dalle vibrazioni continue del carico. È caratterizzata da un arresto quasi istantaneo della rotazione quando sull'asse della vite non ci sono più condizioni di moto. Essa è sottoposta alla condizione teorica:

$$\eta_d < 0.5 \quad (17)$$

dove η_d rappresenta il rendimento dinamico del riduttore nelle condizioni di esercizio (valore riportato nelle tabelle dei dati tecnici).

La condizione inversa, cioè di reversibilità dinamica, è fisicamente possibile quando:

$$\eta_d > 0.5 \quad (18)$$

La tabella di seguito propone indicativamente i vari gradi di reversibilità in funzione del tipo di riduttore e del rapporto di riduzione (dati riferiti solo alla coppia vite-corona).

Ovviamente questi dati sono indicativi in quanto si può avere una irreversibilità più o meno accentuata a causa dell'influenza dei fattori citati precedentemente.

Essendo praticamente impossibile realizzare e garantire una irreversibilità totale è necessario, dove esiste questa esigenza, prevedere un freno esterno sufficiente ad impedire l'avviamento per effetto delle vibrazioni.

		Grado di reversibilità

20 GIOCHI ANGOLARI

La tabella seguente riporta i valori indicativi del gioco angolare riferito all'albero lento, con albero veloce quindi bloccato.

La misura avviene con l'applicazione di una coppia di 5 Nm all'albero lento.

Giochi angolari (albero veloce bloccato)

Le combinazioni dei rapporti rappresentati in tabella sono quelle preferenziali, e suggerite dal costruttore.

Il servizio tecnico di Bonfiglioli potrà eventualmente considerare le richieste di combinazioni di rapporti diverse da quelle proposte, purchè inferiori al valore massimo indicato in tabella.

24 PREDISPOSIZIONI MOTORE

24.1 Motori standard IEC

Nelle tabelle vengono riportati gli abbinamenti motore possibili in termini puramente geometrici. La scelta del motoriduttore deve essere effettuata seguendo le istruzioni specificate al paragrafo: “Selezione”, rispettando in particolare la condizione $S \geq f_s$.

24.4 Motori non normalizzati

Per l'accoppiamento a motori elettrici non normalizzati, l'interfaccia motore dei riduttori serie VF e W può essere configurata con combinazioni albero veloce/flangia ibride, non corrispondenti cioè alla normativa IEC. La combinazione albero/flangia è esplicitata mediante i rispettivi diametri e qui di seguito esemplificata.

Gli abbinamenti albero/flangia disponibili, e i rapporti di trasmissione ai quali sono limitati, sono riportati nella tabella seguente.

		80	90	105	120	140	160	200

Abbinamenti standard

Alcuni abbinamenti ibridi albero/flangia sono eseguibili anche per riduttori VF di interasse 130 e superiore. In questo caso consultare il Servizio Tecnico di Bonfiglioli per la disponibilità.

Le configurazioni risultanti dalla tabella sopra riportata sono da intendersi possibili esclusivamente per quanto riguarda la compatibilità geometrica.

La compatibilità meccanica dell'insieme motore/riduttore dovrà essere ulteriormente verificata mediante l'uso delle consuete tabelle di selezione per potenza/velocità.

In particolare dovranno essere evitati gli abbinamenti motore che generano fattori di sicurezza $S < 0,9$.

25 MOMENTO D'INERZIA

Le tabelle tecniche seguenti indicano i valori del momento d'inerzia J_r [Kgm²] riferiti all'asse veloce del riduttore; per una migliore facilità di lettura riportiamo le definizioni dei simboli usati:

	<p>I valori riferiti a questo simbolo sono da attribuire al riduttore compatto senza motore. In questo caso, per avere il momento d'inerzia complessivo del motoriduttore, si dovrà sommare il valore corrispondente al riduttore compatto, a quello del motore da applicare (dato reperibile nelle tabelle delle caratteristiche tecniche dei motori elettrici).</p>		<p>I valori relativi a questi simboli sono da attribuire al riduttore predisposto per attacco motore (grandezza IEC...).</p>
			<p>I valori attribuiti al riduttore sono riferiti a questi simboli.</p>

29 ALBERO CLIENTE

Realizzare l'albero condotto che si accoppierà con il riduttore con un acciaio di buona qualità, rispettando le dimensioni riportate in tabella.

Si suggerisce inoltre di completare il montaggio con un dispositivo di bloccaggio assiale dell'albero, ad esempio come illustrato nel seguito, avendo cura di verificare e dimensionare i vari componenti in funzione delle diverse esigenze applicative.

30 LIMITATORE DI COPPIA

30.1 Descrizione

Il limitatore di coppia a frizione è studiato e realizzato per i riduttori senza fine **VF44 - VF49** e **W63... W110**, è un dispositivo di protezione atto a salvaguardare la trasmissione da sovraccarichi accidentali che potrebbero danneggiare tutti gli elementi della trasmissione creando seri inconvenienti alla macchina operatrice.

Rispetto ai tradizionali limitatori di coppia montati esternamente al riduttore questa versatile soluzione presenta i seguenti vantaggi:

- nessun ingombro aggiuntivo esterno ai riduttori forniti in versione standard
- lavorando a completo bagno d'olio non richiede nessuna manutenzione
- La coppia di slittamento puo essere facilmente regolata tramite una semplice operazione manuale dall'esterno del riduttore
- lo slittamento, anche continuo, non crea danneggiamenti alla meccanica o consumi anormali, in quanto le superfici di slittamento sono separate da un costante velo d'olio.

Se ne sconsiglia l'utilizzo in meccanismi di sollevamento.

30.2 Modo di funzionamento

Il limitatore di coppia funziona come una frizione biconica con le sedi ricavate direttamente sulla corona in bronzo e sul mozzo in ghisa sferoidale GS400/12 monolitica avente l'albero lento cavo passante, il quale permette di collegare la macchina operatrice direttamente al nostro riduttore.

Le sedi coniche sono strette fra loro per effetto di una forza assiale costante generata da molle a tazza.

La registrazione della coppia di slittamento si effettua in modo semplice tramite la rotazione di una ghiera esterna al riduttore.

30.3 Protezione dell'impianto da sovraccarichi

Il limitatore opportunamente tarato alla coppia necessaria alla macchina operatrice, salvaguarda tutti gli organi meccanici del cinematismo evitando danneggiamenti dovuti a eventuali e ripetuti sovraccarichi.

30.4 Disinserimento in condizioni di irreversibilità

In determinate applicazioni può essere utile ruotare, a macchina ferma, l'albero lento del riduttore. Questa situazione non e sempre possibile nei riduttori a vite senza fine tradizionali. Tramite questo dispositivo, allentando opportunamente la ghiera di registrazione, possiamo eseguire agevolmente questa operazione.

30.5 VF...L, W...L

30.7 Registrazione coppia di slittamento

In fabbrica viene eseguita una pretaratura dello slittamento su un momento torcente coincidente col valore di coppia nominale Mn_2 [$n_1=1400$] del riduttore tipo VF o W.

Qui di seguito sono descritte le operazioni eseguite in fabbrica per realizzare la taratura della coppia di slittamento. Le stesse operazioni, a meno del passo (2), dovranno essere ripercorse quando si vuole impostare un valore di coppia diverso dall'originale.

1. La ghiera di registrazione viene avvitata fino a che le molle a tazza non sono sufficientemente caricate da non potere ruotare liberamente, se azionate manualmente.

2. Per mezzo di un bulino vengono incise, in identica posizione angolare, due marcature di riferimento, sia sulla ghiera che sulla sporgenza d'albero lento.

Questa posizione di riferimento costituirà il punto iniziale per il conteggio dei successivi giri della ghiera e la conseguente taratura di coppia.

3. Infine la ghiera viene avvitata delle frazioni di giro corrispondenti al valore di coppia nominale Mn_2 del riduttore in oggetto. Il riferimento in questo caso è il diagramma sotto riportato, il quale sarà d'utilità anche per le eventuali nuove impostazioni che si dovessero rendere necessarie nel tempo.

VF-EP / W-EP - RIDUTTORI E MOTORIDUTTORI PER AMBIENTI CORROSIVI E ASETTICI

31 I VANTAGGI DELL'ESECUZIONE EP PER L'INDUSTRIA DI PROCESSO ALIMENTARE

Le industrie dei settori beverage e alimentare oggi hanno a disposizione una gamma di motoriduttori appositamente studiati per le loro specifiche esigenze, normalmente non riscontrabili nelle produzioni di serie.

L'assoluta ermeticità del riduttore e la facile igienizzazione delle sue superfici consentono possibilità d'installazione anche in prossimità del processo di lavorazione, senza la necessità di ulteriori schermi o carterature.

Il sistema epossidico di protezione delle superfici esterne, dello spessore complessivo di ca. 200 µm, fornisce eccezionali doti di resistenza meccanica all'abrasione.

Il gruppo completo, riduttore o motoriduttore, è protetto con un sistema realizzato da una mano di fondo aggrappante e successiva mano di smalto di finitura, esente da piombo e da cromati. Il materiale utilizzato è approvato da FDA e NSF (in funzione della tinta scelta) e certificato da laboratori indipendenti come idoneo per il contatto accidentale con gli alimenti, oltre ad assicurare una protezione specifica all'aggressione di numerosi acidi, alcalini e solventi, spruzzi e i detergenti per pulizia chimica più frequentemente utilizzati. Agli effetti della norma ISO 9223 il sistema di verniciatura adottato risulta idoneo per gli ambienti più aggressivi, classificati cioè in classe C5.

Sono disponibili tre diverse tinte, identificate dalle sigle RAL 9010 (bianco), 5010 (blu) e 9006 (grigio chiaro metallizzato).

Il prodotto serie **EP** è ulteriormente configurabile con un'ampia dotazione di opzioni e accessori per il montaggio.

Grandezze riduttore: 44 (escluso VFR), 49, 63, 75, 86. Motorizzazioni disponibili: da 0,12 a 4 kW, in esecuzione sia compatta che a standard IEC - 2, 4 e 6 poli

Ideali per le industrie di processo alimentari

Resistenti alla corrosione

Servizio idoneo per gli ambienti più ostili

Lavabili/sanificabili con i detergenti più comunemente utilizzati

ALLESTIMENTO RIDUTTORE

- ① Il riduttore è completamente sigillato allo scopo di minimizzare ogni possibile contaminazione dell'ambiente esterno.
- ② Albero lento cavo in acciaio inossidabile AISI 316.
- ③ Targhetta e viteria in acciaio inossidabile.
- ④ Fori per drenaggio acqua. Evitano il ristagno dopo il lavaggio.
- ⑤ È disponibile in opzione olio sintetico omologato da NSF quale lubrificante UH1 per l'uso nell'industria alimentare e farmaceutica e compatibile con le norme FDA per il contatto accidentale con gli alimenti.

- ⑥ Anelli di tenuta dotati di molla interna in acciaio inox. Disponibili tenute in PTFE con schermo in inox, resistenti ai lavaggi in pressione.
- ⑦ Trattamento epossidico delle superfici esterne, approvato FDA e NSF (in funzione della tinta scelta) per il contatto accidentale con gli alimenti e altamente resistente alla corrosione.
- ⑧ Chiusura dei fori filettati non utilizzati mediante tappi a pressione.

ALLESTIMENTO MOTORE

- ⑨ Motore con protezione IP 56 di serie. Targhetta e viteria in acciaio inox. Avvolgimenti tropicalizzati – doppia impregnazione seguita da doppia essiccazione in forno.
- ⑩ Cuscinetti tipo 2RS con lubrificazione “a vita”. Morsettiera sigillata con guarnizioni in NBR. Quattro fori per lo scarico condensa, chiusi con viti, e ricavati negli scudi anteriore e posteriore. Giunti di accoppiamento scudi-cassa sigillati.
- ⑪ Ventola di raffreddamento in materiale poliammidico, compatibile con gli alimenti.

33 OPZIONI RIDUTTORE

PX

Opzione Anelli di tenuta albero lento. Gli speciali anelli di tenuta offerti in opzione estendono l'applicabilità dei riduttori ai processi in cui sono frequenti i lavaggi con getti d'acqua in pressione.

Lo schermo esterno in acciaio INOX e la realizzazione a doppio labbro infatti aggiungono alla funzionalità di base anche la resistenza alla pressione esterna, mentre il particolare materiale utilizzato (PTFE) garantisce eccezionale resistenza agli elementi chimici aggressivi, basso coefficiente d'attrito e lunga durata.

PV

Anelli di tenuta in fluoro-elastomero su albero lento. Molla interna in acciaio inox.

UH1

Opzione Olio compatibile con gli alimenti. Il riduttore viene riempito in fabbrica con lubrificante "long life" rispondente ai requisiti delle Normative più diffuse e in particolare è omologato da NSF quale lubrificante UH1 per l'uso nell'industria alimentare e farmaceutica, inoltre soddisfa le norme FDA 21 CFR Sec. 178.3570.

La sua natura sintetica a base di poliglicoli, oltre ad estenderne l'uso ad un ampio campo di temperature (-25° C sino a +150° C), non rende necessarie sostituzioni periodiche e pertanto, in assenza di contaminanti, il lubrificante potrà considerarsi "a vita".

PROVE DOCUMENTALI

AC - Attestato di conformità

Documento il cui rilascio attesta la conformità del prodotto all'ordinativo e la costruzione dello stesso in conformità alle procedure standard di processo e di controllo previste dal sistema di Qualità Bonfiglioli Riduttori.

CC - Certificato di collaudo

La specifica comporta la conduzione di verifiche di conformità all'ordine, controlli visivi generali e verifiche strumentali delle dimensioni di accoppiamento. Sono inoltre condotti controlli generali di funzionamento a vuoto e verifiche della funzionalità delle guarnizioni di tenuta in modalità statica e in funzionamento. Il collaudo si applica ad un campione statistico del lotto di spedizione.

34 OPZIONI MOTORI

Le opzioni disponibili per i motori BN-EP e M-EP sono: D3, E3, K1, H1, NH1, RC, RV, ACM, CC, CUS, S2, S3, S9.

Per informazioni sulle opzioni, consultare i relativi capitoli nella sezione Motori Elettrici.

35 ALTRE INFORMAZIONI SUI RIDUTTORI E I MOTORIDUTTORI

Le posizioni di montaggio, i dati tecnici, le predisposizioni motore, i momenti d'inerzia e le dimensioni dei riduttori **VF-EP** e **W-EP** non cambiano rispetto all'equivalente prodotto delle serie **VF** e **W**. Allo stesso modo le informazioni relative ai motori **M-EP** e **BN-EP** non cambiano rispetto all'equivalente prodotto della serie **M** e **BN**. Tutte queste informazioni possono essere reperite nei relativi capitoli di questo catalogo.

36 GLI ACCESSORI DELLA SERIE EP

A seconda delle necessità applicative potranno essere richiesti determinati accessori che completano l'architettura del prodotto, e in particolare:

- albero lento, sia semplice che bilaterale, in acciaio INOX tipo 316, completo di chiavette in identico materiale
- braccio di reazione in lamiera verniciata (specificare RAL_)
- coperchio di sicurezza per la zona albero lento (cavo) in plastica (W63,W75 e W86) o lamiera rivestita in gomma NBR (VF 44,VF 49) con viteria in acciaio INOX e grado di protezione complessivo IP56.

DISPOSITIVO FINE-CORSA RVS

37 INFORMAZIONI GENERALI

Il dispositivo fine-corsa, tipo RVS, é progettato per completare ed adattare i motoriduttori a vite senza fine di Bonfiglioli Riduttori all'azionamento di:

- finestre e ombreggi per serre
- cancelli automatici
- finestre a vasistas
- dosatori per granaglie nel settore zootecnico
- valvole a farfalla

I motoriduttori dotati del dispositivo **RVS** sono anche idonei per qualsiasi altra applicazione intermittente, in cui si richieda un moto controllato e preciso.

Per le applicazioni sopra descritte, caratterizzate da un tipo di servizio leggero e intermittente, si raccomanda di effettuare la selezione del gruppo di trasmissione unicamente dalle pagine del paragrafo 40. Le selezioni così effettuate saranno conformi al particolare tipo di servizio e alle massime velocità compatibili con il regolare funzionamento del dispositivo fine-corsa.

La configurazione completa si ottiene assemblando il dispositivo fine-corsa sul relativo motoriduttore, mediante lo specifico kit di montaggio (disponibile per i gruppi tipo VF 49, W63, W75 e W86), illustrato alla pagina seguente.

Per consentire il montaggio del dispositivo **RVS**, i motoriduttori devono essere nella forma costruttiva flangiata.

37.1 Caratteristiche tecniche

Il funzionamento del dispositivo fine-corsa si basa sul movimento differenziale di due coppie di ruote, dotate di camma, e dal relativo azionamento di microinterruttori di precisione che attraverso relais (a cura dell'installatore) comandano l'arresto e l'inversione del moto.

Le posizioni estreme del moto, tipicamente l'apertura e la chiusura del telaio, sono facilmente impostabili con il motoriduttore già installato e senza l'uso di specifiche attrezzature, al di fuori di una comune chiave a brugola.

Una volta raggiunta e fissata la regolazione desiderata, questa viene mantenuta costante nel tempo, consentendo una elevata ripetibilità negli azionamenti.

Nella sua esecuzione di base il gruppo fine-corsa **RVS** è fornito con una coppia di cavi, della lunghezza di ca. un metro, pre-cablati internamente.

Il gruppo è inoltre disponibile anche nelle seguenti varianti:

RVS ME: dotato di scatola morsettiera esterna a sei terminali, ai quali allacciare i cavi di collegamento con i relais.

RVS DM: corredato di doppia serie di microinterruttori collegati in serie, per una sicurezza di intervento assoluta e conforme alle Norme che prevedono la ridondanza di questo dispositivo.

RVS ME DM: dispositivo dotato di morsettiera esterna e di doppia serie di microinterruttori, come più sopra descritto.

In tutte le sue varianti il dispositivo fine-corsa si caratterizza come:

- estremamente silenzioso
- di ingombro contenuto
- di facile installazione e regolazione
- dotato di protezione complessiva IP55
- regolabile all'interno di un campo massimo di 43 giri dell'albero Lento

38 CODICI PER L'ORDINATIVO

Individuare il dispositivo, o la sua variante, necessario per l'applicazione e riferirsi alla tabella sottostante per il relativo codice per l'ordinativo:

M2 CARATTERISTICHE GENERALI

M2.1 Programma di produzione

I motori elettrici asincroni trifase del programma di produzione della BONFIGLIOLI RIDUTTORI sono previsti nelle forme costruttive base IMB5, IMB14 e loro derivate con le seguenti polarità: 2, 4, 6, 2/4, 2/6, 2/8, 2/12.

Nel presente catalogo sono evidenziate inoltre, le caratteristiche tecniche dei motori in versione integrata, tipo M.

M2.2 Normative

I motori descritti in questo catalogo sono costruiti in accordo alle Norme ed unificazioni applicabili evidenziate nella tabella seguente.

(F 1)

Titolo	CEI	IEC
Prescrizioni generali per macchine elettriche rotanti	CEI EN 60034-1	IEC 60034-1
Marcatura dei terminali e senso di rotazione per macchine elettriche rotanti	CEI 2-8	IEC 60034-8
Metodi di raffreddamento delle macchine elettriche	CEI EN 60034-6	IEC 60034-6
Dimensioni e potenze nominali per macchine elettriche rotanti	EN 50347	IEC 60072
Classificazione dei gradi di protezione delle macchine elettriche rotanti	CEI EN 60034-5	IEC 60034-5
Limiti di rumorosità	CEI EN 60034-9	IEC 60034-9
Sigle di designazione delle forme costruttive e dei tipi di installazione	CEI EN 60034-7	IEC 60034-7
Tensione nominale per i sistemi di distribuzione pubblica dell'energia elettrica a bassa tensione	CEI 8-6	IEC 60038
Grado di vibrazione delle macchine elettriche	CEI EN 60034-14	IEC 60034-14

I motori corrispondono inoltre alle Norme straniere adeguate alle IEC 60034-1 e qui riportate.

(F 2)

DIN VDE 0530	Germania
BS5000 / BS4999	Gran Bretagna
AS 1359	Australia

NEN 3173	Paesi Bassi
SS 426 01 01	Svezia

M2.3 Motori per USA e Canada

CUS

I motori sono disponibili in esecuzione NEMA Design C (per le caratteristiche elettriche), certificata in conformità alle norme CSA (Canadian Standard) C22.2 N° 100 e UL (Underwriters Laboratory) UL 1004-1 con targhetta riportante entrambi i marchi sotto illustrati, specificare in questo caso l'opzione CUS.

L'opzione CUS non è applicabile ai motori dotati di servoventilazione.

Le tensioni delle reti di distribuzione americane e le corrispondenti tensioni nominali da specificare per il motore sono indicate nella tabella seguente:

(F 3)

Frequenza	Tensione di rete	V _{mot}
60 Hz	208 V	200 V
	240 V	230 V
	480 V	460 V
	600 V	575 V

L'opzione CUS è applicabile anche ai motori a 50 Hz.

I motori con tensione di alimentazione in rapporto 2 (es. 230/460-60; 220/440-60) presentano di serie una morsettiera a 9 terminali.

Per le stesse esecuzioni, e inoltre per l'alimentazione 575V-60Hz, la potenza di targa corrisponde a quella normalizzata a 50Hz.

Per i motori autofrenanti con freno in c.c. tipo BN/M_FD l'alimentazione del raddrizzatore è da morsettiera motore con tensione 230V a.c. monofase.

Per i motori autofrenanti **l'alimentazione del freno** è così predisposta:

(F 4)

BN_FD M_FD	BN_FA M_FA	Specificare
Da morsettiera motore 1~230V c.a.	Alimentazione separata 230V Δ	230SA
	Alimentazione separata 460V Y	460SA

M2.4 China Compulsory Certification

CCC

I motori elettrici destinati ad essere commercializzati nella Repubblica Popolare Cinese rientrano nell'applicabilità del sistema di certificazione CCC (China Compulsory Certification). I motori BN con coppia nominale fino a 7Nm sono disponibili con certificazione CCC e targhetta speciale riportante il marchio sotto illustrato:

L'opzione CCC non è applicabile ai motori dotati di servoventilazione.

M2.5 Direttive 2006/95/CE (LVD) e 2004/108/CE (EMC)

I motori delle serie BN ed M sono conformi ai requisiti delle Direttive 2006/95/CE (Direttiva Bassa Tensione) e 2004/108/CE (Direttiva Compatibilità Elettromagnetica), e riportano in targa la marcatura CE. Per quanto riguarda la Direttiva EMC, la costruzione è in accordo alle Norme CEI EN 60034-1, EN 61000-6-2, EN 61000-6-4.

I motori con freno in c.c. tipo FD, se corredati dell'opportuno filtro capacitivo in ingresso al raddrizzatore (opzione **CF**), rientrano nei limiti di emissione previsti dalla Norma EN 61000-6-3:2007 "Compatibilità elettromagnetica - Norma Generica sull'emissione - Parte 6-3: Ambienti residenziali, commerciali e dell'industria leggera".

I motori soddisfano inoltre le prescrizioni della Norma CEI EN 60204-1 "Equipaggiamento elettrico delle macchine".

È responsabilità del costruttore o dell'assemblatore dell'apparecchiatura che incorpora i motori come componenti garantire la sicurezza e la conformità alle direttive del prodotto finale.

M2.6 Tolleranze

Secondo le Norme CEI EN 60034-1, per le grandezze garantite sono ammesse le tolleranze qui indicate:

(F 5)	-0.15 (1 - η) $P \leq 50\text{kW}$	Rendimento
	$-(1 - \cos\phi)/6$ min 0.02 max 0.07	Fattore di potenza
	$\pm 20\%$ *	Scorrimento
	+20%	Corrente a rotore bloccato
	-15% +25%	Coppia a rotore bloccato
	-10%	Coppia max

* $\pm 30\%$ per motori con $P_n < 1 \text{ kW}$

M3 CARATTERISTICHE MECCANICHE

M3.1 Forme costruttive

I motori serie BN sono previsti nelle forme costruttive indicate in tabella (F6) secondo le Norme CEI EN 60034-14.

Le forme costruttive sono le seguenti:

IM B5 (base)

IM V1, IM V3 (derivate)

IM B14 (base)

IM V18, IMV19 (derivate)

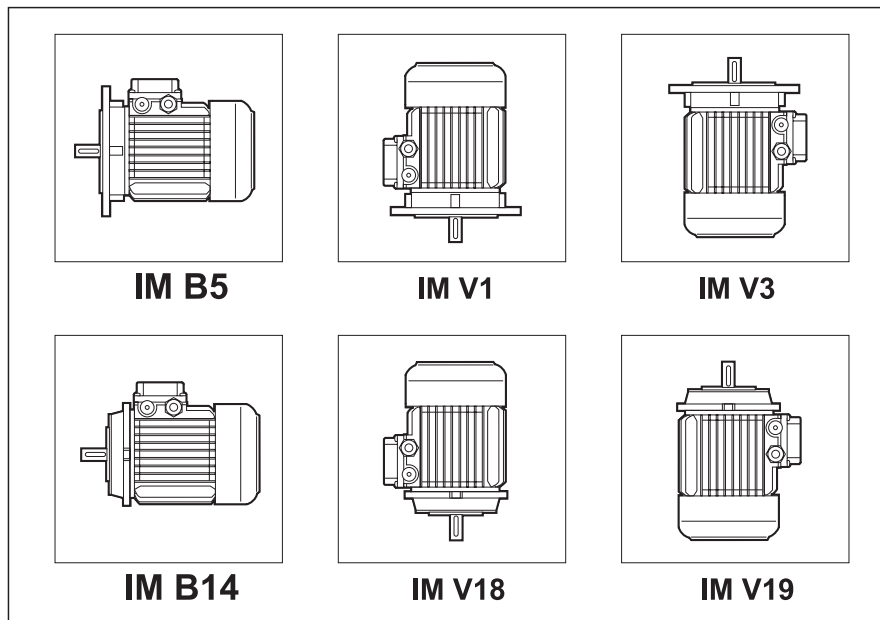

I motori in forma costruttiva IM B5 possono essere installati nelle posizioni IM V1 e IM V3; i motori in forma costruttiva IM B14 possono essere installati nelle posizioni IM V18 e IM V19.

In questi casi, sulla targa del motore sarà indicata la forma costruttiva base IM B5 o IM B14.

Nelle forme costruttive dove il motore assume una posizione verticale con albero in basso, si consiglia di richiedere l'esecuzione con tettuccio parapiovvia (da prevedere sempre nel caso di motori autofrenanti).

Tale esecuzione, presente nelle opzioni, va richiesta espressamente in fase di ordine in quanto non è prevista nella versione base.

(F 6)

I motori in forma flangiata possono essere forniti con dimensioni di accoppiamento ridotte, come riportato nella tabella seguente - esecuzioni **B5R**, **B14R**. Il loro utilizzo in abbinamento ai riduttori dovrà in ogni caso risultare coerente con la massima potenza installabile sui riduttori stessi (vedere i capitoli "Predisposizioni motori"). Nei casi in cui non sia rispettata questa condizione occorre contattare il Servizio Tecnico per la verifica dell'abbinamento.

(F 7)

	BN 71	BN 80	BN 90	BN 100	BN 112	BN 132
	DxE - Ø

(1) flangia con fori passanti

(2) flangia con fori filettati

M3.2 Grado di protezione

IP..

La tabella sottostante riassume la disponibilità dei vari gradi di protezione.

Indipendentemente dal grado di protezione specificato, per installazione all'aperto i motori devono essere protetti dall'irraggiamento diretto e, nel caso d'installazione con albero rivolto verso il basso, è necessario specificare ulteriormente il tettuccio di protezione contro l'ingresso di acqua e corpi solidi (opzione **RC**).

(F 8)

		IP 54	IP 55	IP 56
BN	M	⊘	standard	
BN_FD BN_FA	M_FD M_FA	standard		⊘

M3.3 Ventilazione

I motori sono raffreddati mediante ventilazione esterna (IC 411 secondo CEI EN 60034-6) e sono provvisti di ventola radiale in plastica che funziona in entrambi i sensi di rotazione.

L'installazione deve assicurare una distanza minima dalla calotta copriventola alla parete in modo da non avere impedimenti all'ingresso aria e permettere la possibilità di eseguire l'opportuna manutenzione del motore e, se previsto, del freno.

Su richiesta è possibile prevedere una ventilazione forzata indipendente (opzione U1). Questa soluzione consente di aumentare il fattore di utilizzo del motore nel caso di alimentazione da inverter e funzionamento a giri ridotti.

M3.4 Senso di rotazione

È possibile il funzionamento in entrambi i sensi di rotazione.

Con collegamento dei morsetti U1,V1,W1 alle fasi di linea L1,L2,L3 si ha rotazione oraria vista dal lato accoppiamento, mentre la marcia antioraria si ottiene scambiando fra loro due fasi.

M3.5 Rumorosità

I valori di rumorosità, rilevati secondo il metodo previsto dalle Norme ISO 1680, sono contenuti entro i livelli massimi previsti dalle Norme CEI EN 60034-9.

M3.6 Vibrazioni ed equilibratura

Tutti i rotor sono equilibrati con mezza linguetta e rientrano nei limiti di intensità di vibrazione previsti dalle Norme CEI EN 60034-14.

Per particolari esigenze di silenziosità potrà essere previsto, a richiesta, un'esecuzione antivibrante in grado ridotto B. La tabella seguente riporta i valori della velocità efficace di vibrazione per equilibratura standard (A) e incrementata (B).

(F 9)

Grado di vibrazione	Velocità di rotazione n [min ⁻¹]	Limiti della velocità di vibrazione
		[mm/s] BN 56 ≤ H ≤ BN 200 M05 ≤ H ≤ M5
A	600 < n < 3600	1.6
B	600 < n < 3600	0.70

I valori si riferiscono a misure con motore liberamente sospeso e funzionamento a vuoto.

M3.7 Morsettiera motore

La morsettiera principale è a sei morsetti per collegamento con capicorda (esecuzione a 9 morsetti per tensioni americane "Dual Voltage"). All'interno della scatola è previsto un morsetto per il conduttore di terra. Le dimensioni dei perni di attacco sono riportate nella tabella seguente.

Per l'alimentazione del freno vedi par. M6 (freno FD), M7 (freno FA).

Nel caso di motori autofrenanti, il raddrizzatore per l'alimentazione del freno è fissato all'interno della scatola e provvisto di adeguati morsetti di collegamento.

Eseguire i collegamenti secondo gli schemi riportati all'interno della scatola coprimorsetti o nei manuali d'uso.

(F 10)

		N° terminali	Filettatura terminali	Sezione max. del conduttore mm ²
BN 56 ... BN 71	M05, M1	6	M4	2.5
BN 80, BN 90	M2	6	M4	2.5
BN 100 ... BN 112	M3	6	M5	6
BN 132 ... BN 160MR	M4	6	M5	6
BN 160M ... BN 180M	M5	6	M6	16

BN 63 ... BN 160MR	M05 ... M4	9	M4	6
BN 160M ... BN 200L	M5	9	M6	16

M3.8 Ingresso cavi

Nel rispetto della Norma EN 50262, i fori di ingresso cavi nelle scatole morsettiera presentano filettature metriche della misura indicata nella tabella seguente.

(F 11)

		Ingresso cavi	Diametro max. cavo allacciabile [mm]
BN 63	M05	2 x M20 x 1.5	13
BN 71	M1	2 x M25 x 1.5	17
BN 80 - BN 90	M2	2 x M25 x 1.5	17
BN 100	M3	2 x M32 x 1.5	21
		2 x M25 x 1.5	17
BN 112	—	2 x M32 x 1.5	21
		2 x M25 x 1.5	17
BN 132...BN 160MR	M4	4 x M32 x 1.5	21
BN 160M...BN 200L	M5	2 x M40 x 1.5	28

M3.9 Cuscinetti

I cuscinetti previsti sono del tipo radiale a sfere con lubrificazione permanente precaricati assialmente. I tipi utilizzati sono indicati nelle tabelle seguenti. La durata nominale a fatica L_{10h} dei cuscinetti, in assenza di carichi esterni applicati è superiore a 40.000 ore, calcolata secondo ISO 281.

DE = lato comando

NDE = lato opposto comando

M4 CARATTERISTICHE ELETTRICHE

M4.1 Tensione

I motori ad una velocità sono previsti nell'esecuzione standard per tensione nominale 230 / 400 V Δ/Y , 50 Hz, o 400 / 690 V Δ/Y , 50 Hz, con tolleranza di tensione $\pm 10\%$, in accordo a quanto specificato nella tabella sottostante.

Per tutti i motori BN ed M, la cui configurazione tensione / frequenza non sia contenuta nella tabella sottostante, la tolleranza di tensione è ridotta al $\pm 5\%$.

Per il funzionamento ai limiti di tolleranza, la temperatura può superare di 10 K il limite previsto dalla classe di isolamento adottata.

I motori sono idonei per il funzionamento sulla rete di distribuzione europea con tensione in accordo alla pubblicazione IEC 60038.

(F 14)

			$V_{\text{mot}} \pm 10\%$ 3 ~	Esecuzione
IE1	BN 56 ... BN 132	M0 ... M4	230 / 400 V - Δ/Y - 50 Hz	standard
			400 / 690 V - Δ/Y - 50 Hz	a richiesta, senza sovrapprezzo
			460 V Y - 60 Hz	standard
	BN 160 ... 200	M5	400 / 690 V - Δ/Y - 50 Hz	standard
			460 V Δ - 60 Hz	standard

¹ solo motori a 4 poli

I motori a due velocità a 50Hz, sono previsti per tensione nominale standard 400V; tolleranze applicabili secondo CEI EN 60034-1.

Nella tabella seguente sono indicati i vari tipi di collegamenti previsti per i motori in funzione della polarità.

(F 15)

Poli		Collegamento avvolgimento
2	BN 63 ... BN 200	$\Delta / Y^{(2)}$
4	BN 56 ... BN 200	
6	BN 63 ... BN 200	
8	BN 71 ... BN 132	
2/4	BN 63 ... BN 132	Δ / YY (Dahlander)
2/6	BN 71 ... BN 132	Y / Y (due avvolgimenti)
2/8	BN 71 ... BN 132	
2/12	BN 80 ... BN 132	
4/6	BN 71 ... BN 132	
4/8	BN 80 ... BN 132	Δ / YY (Dahlander)

(²) I motori con tensione in rapporto 2 (es. 230/460-60) saranno dotati di morsettiera a 9 perni con collegamento $\Delta\Delta / \Delta$ o YY / Y (eccetto il BN 63 6 poli Δ / Y)

M4.2 Frequenza

La potenza di targa dei motori BN / M a 60 Hz corrisponde a quanto riportato nella tabella seguente.

(F 16)

		P_n [kW]			
		2P	4P	6P	8P (*)
BN 56A	–	–	0.07	–	–

(*) Escluso motori M_

Motori BN / M a doppia polarità alimentati a 60 Hz avranno un aumento della potenza nominale, riferita a 50 Hz, pari al 15%. Qualora sulla targhetta di un motore destinato ad essere alimentato a 60 Hz sia richiesto un valore di potenza nominale pari a quello normalizzato a 50 Hz, specificare in designazione l'opzione PN. I motori normalmente avvolti per frequenza 50 Hz possono essere usati in reti a 60 Hz, ma i relativi dati dovranno essere corretti secondo la seguente tabella.

Ad esclusione di esecuzioni CUS e autofrenanti, i motori configurati a 50 Hz riportano in targhetta anche i corrispondenti valori a 60 Hz (vedere tabella sottostante).

(F 17)

50 Hz V - 50 Hz	60 Hz			
	V - 60 Hz	P _n - 60 Hz	M _n , M _a /M _n - 60 Hz	n [min ⁻¹] - 60 Hz
230/400 Δ/Y	220 - 240 Δ	1	0.83	1.2
	380 - 415 Y			
400/690 Δ/Y	380 - 415 Δ			
230/400 Δ/Y	265 - 280 Δ	1.15	1	1.2
	440 - 480 Y			
400/690 Δ/Y	440 - 480 Δ			

M4.3 Temperatura ambiente

Le tabelle dei dati tecnici del catalogo riportano le caratteristiche funzionali a 50 Hz in condizioni ambientali standard secondo le Norme CEI EN 60034-1 (temperatura 40 °C e altitudine <1000 m s.l.m.). I motori possono essere impiegati a temperature comprese tra 40 °C e 60 °C applicando i declassamenti di potenza indicati nelle tabelle seguenti.

(F 18)

Temperatura ambiente (°C)	40°	45°	50°	55°	60°
Potenza ammissibile in % della potenza nominale	100%	95%	90%	85%	80%

Quando è richiesto un declassamento del motore superiore al 15%, contattare il ns. Servizio Tecnico.

M4.4 Classe d'isolamento

CL F

I motori di produzione Bonfiglioli impiegano, di serie, materiali isolanti (filo smaltato, isolanti, resine d'impregnazione) in classe **F**.

CL H

Su richiesta può venire specificata la classe di isolamento **H**.

In genere, per i motori in esecuzione standard la sovratemperatura dell'avvolgimento statore è contenuta entro il limite di 80 K, corrispondente alla sovratemperatura di classe B.

L'accurata scelta dei componenti del sistema isolante consente l'impiego dei motori anche in climi tropicali ed in presenza di vibrazioni normali.

Per applicazioni in presenza di sostanze chimiche aggressive, o di elevata umidità, è consigliabile contattare il Servizio Tecnico Bonfiglioli per la selezione del prodotto più idoneo.

Non disponibile per i motori conformi alle norme CSA e UL (opzione CUS).

(F 19)

M4.5 Tipo di servizio

Se non indicato diversamente, la potenza dei motori riportata a catalogo si riferisce al servizio continuo S1. Per i motori utilizzati in condizioni diverse da S1 sarà necessario identificare il tipo di servizio previsto con riferimento alle Norme CEI EN 60034-1. In particolare per servizi S2 ed S3 è possibile ottenere una maggiorazione della potenza rispetto a quella prevista per il servizio continuo secondo quanto indicato nella tabella che segue, valida per i motori a singola polarità.

In alternativa al servizio continuo S1, in fase di configurazione del prodotto è possibile selezionare uno dei seguenti valori: S2, S3 o S9; la targhetta del motore verrà compilata con potenza aumentata coerentemente al tipo di servizio, dati elettrici dedicati e tipo di servizio rispettivamente S2-30min, S3-70% o S9.

Per ulteriori dettagli è necessario contattare il servizio Tecnico Bonfiglioli.

Per le maggiorazioni applicabili a motori a doppia polarità consultare preferibilmente il Servizio Tecnico Bonfiglioli.

(F 20)

	Servizio						Interpellaci
	S2			S3 *			
	Durata del ciclo (min)			Rapporto di intermittenza (I)			
	10	30 (*)	60	25%	40%	70% (*)	
f_m	1.35	1.15	1.05	1.25	1.15	1.1	

* La durata del ciclo dovrà comunque essere uguale o inferiore a 10 minuti; se superiore interpellare il nostro Servizio Tecnico.

(*) Valori predefiniti dalle opzioni

M4.5.1 Rapporto di intermittenza:

$$I = \frac{t_f}{t_f + t_r} \cdot 100 \quad (23)$$

t_f = tempo di funzionamento a carico costante

t_r = tempo di riposo

M4.5.2 Servizio di durata limitata S2

Caratterizzato da un funzionamento a carico costante per un periodo di tempo limitato, inferiore a quello richiesto per raggiungere l'equilibrio termico, seguito da un periodo di riposo di durata sufficiente a ristabilire, nel motore, la temperatura ambiente.

M4.5.3 Servizio intermittente periodico S3:

Caratterizzato da una sequenza di cicli di funzionamento identici, ciascuno comprendente un periodo di funzionamento a carico costante ed un periodo di riposo. In questo servizio, la corrente di avviamento non influenza la sovratemperatura in modo significativo.

M4.6 Funzionamento con alimentazione da inverter

I motori elettrici della serie BN ed M possono essere utilizzati con alimentazione da inverter PWM, e tensione nominale all'ingresso del convertitore fino a 500 V.

Il sistema isolante sui motori di serie prevede l'isolamento di fase con separatori, l'utilizzo di filo smaltato in grado 2 e resine d'impregnazione in classe H (limite di tenuta all'impulso di tensione 1600V picco-picco e fronte di salita $t_s > 0.1\mu s$ ai morsetti motore).

Le caratteristiche tipiche coppia/velocità in servizio S1 per motore con frequenza base $f_b = 50$ Hz sono riportate nella tabella seguente.

Per frequenze di funzionamento inferiori a circa 30 Hz, a causa della diminuzione della ventilazione, i motori standard autoventilati (IC411) devono essere opportunamente declassati in coppia o, in alternativa, devono essere provvisti di servoventilatore indipendente.

Per frequenze maggiori alla frequenza base, raggiunto il valore massimo di tensione di uscita dell'inverter, il motore lavora in un campo di funzionamento a potenza costante, con coppia all'albero che si riduce ca. con il rapporto (f/f_b) .

Poiché la coppia massima del motore decresce ca. con $(f/f_b)^2$, il margine di sovraccarico ammesso dovrà essere progressivamente ridotto.

(F 21)

Per funzionamento oltre la frequenza nominale, la velocità limite meccanica dei motori è riportata nella seguente tabella:

(F 22)

			n [min ⁻¹]		
			2p	4p	6p
≤ BN 112		M05...M3	5200	4000	3000
≥ BN 132		M4, M5	4500	4000	3000

A velocità superiori alla nominale i motori presentano maggiori vibrazioni meccaniche e rumorosità di ventilazione; è consigliabile, per queste applicazioni, un bilanciamento del rotore in grado B e l'eventuale montaggio del servomotori indipendente.

Il servomotori e, se presente, il freno elettromagnetico devono sempre essere alimentati direttamente da rete.

M4.7 Frequenza massima di avviamento Z

Nelle tabelle dei dati tecnici motori è indicata la max frequenza di inserzione a vuoto Z_0 con $I = 50\%$ riferita alla versione autofrenante. Questo valore definisce il numero max di avviamenti orari a vuoto che il motore può sopportare senza superare la max temperatura ammessa dalla classe di isolamento F. Nel caso pratico di motore accoppiato ad un carico esterno con potenza assorbita P_r , massa inerziale J_c e coppia resistente media durante l'avviamento M_L , il numero di avviamenti ammissibile si può calcolare in modo approssimato con la seguente formula:

$$Z = \frac{Z_0 \cdot K_c \cdot K_d}{K_J} \quad (24)$$

dove:

$$K_J = \frac{J_m + J_c}{J_m} \quad \text{fattore di inerzia}$$

$$K_c = \frac{M_a - M_L}{M_a} \quad \text{fattore di coppia}$$

$$K_d = \quad \text{fattore di carico vedi tabella seguente}$$

(F 23)

Con il numero di avviamenti così ottenuto si dovrà in seguito verificare che il massimo lavoro di frenatura sia compatibile con la capacità termica del freno W_{max} indicata nelle tabelle (F30), (F38).

M5 MOTORI ASINCRONI AUTOFRENANTI

M5.1 Funzionamento

L'esecuzione autofrenante prevede l'impiego di freni a pressione di molle alimentati in c.c. (tipo FD) o in c.a. (tipo FA).

Tutti i freni funzionano secondo il principio di sicurezza, ossia intervengono in seguito alla pressione esercitata dalle molle, in mancanza di alimentazione.

(F 24)

Legenda:

- ① disco
- ② mozzo
- ③ áncora mobile
- ④ bobina
- ⑤ scudo posteriore motore
- ⑥ molle

In mancanza di tensione, l'ancora mobile spinta dalle molle di pressione blocca il disco freno tra la superficie dell'ancora stessa e lo scudo motore impedendo la rotazione dell'albero.

Quando la bobina viene eccitata, l'attrazione magnetica esercitata sull'ancora mobile vince la reazione elastica delle molle e libera il disco freno, e conseguentemente l'albero motore con esso solidale.

M5.2 Caratteristiche generali

- Coppie frenanti elevate (generalmente $M_b \approx 2 M_n$) e regolabili.
- Disco freno con anima in acciaio a doppia guarnizione d'attrito (materiale a bassa usura, senza amianto).
- Cava esagonale sull'albero motore, lato ventola (NDE), per rotazione manuale (non prevista quando sono presenti le opzioni PS, RC, TC, U1, U2, EN1, EN2, EN3, EN4, EN5, EN6).
- Sblocco meccanico manuale (opzioni **R** e **RM** per BN/M_FD; opzione **R** per BN/M_FA).
- Trattamento anticorrosivo di tutte la superfici del freno.
- Isolamento in classe F.

M6 MOTORI AUTOFRENANTI IN C.C., TIPO BN_FD e M_FD

Grandezze: BN 63 ... BN 200L / M05 ... M5

(F 25)

(F 26)

Freno elettromagnetico con bobina toroidale in **corrente continua** fissato con viti allo scudo motore; le molle di precarico realizzano il posizionamento assiale del corpo magnete.

Il disco freno è scorrevole sul mozzo trascinatore in acciaio calettato sull'albero e previsto di dispositivo antivibrazione.

I motori sono forniti con freno tarato in fabbrica al valore di coppia riportato nelle tabelle dati tecnici; la coppia frenante può essere regolata modificando il tipo e/o il numero delle molle.

A richiesta, i motori possono essere previsti di leva per lo sblocco manuale con ritorno automatico (**R**) o con mantenimento della posizione di rilascio freno (**RM**); per la posizione angolare della leva di sblocco vedi descrizione della relativa variante al paragrafo "SISTEMI DI SBLOCCO FRENO".

Il freno FD garantisce elevate prestazioni dinamiche e bassa rumorosità; le caratteristiche d'intervento del freno in corrente continua possono essere ottimizzate in funzione dell'applicazione, utilizzando i vari tipi di alimentatore disponibili e/o realizzando l'opportuno cablaggio.

Per applicazioni che prevedono sollevamenti e/o elevati valori di lavoro orario smaltibile, contattare il servizio tecnico commerciale.

M6.1 Grado di protezione

L'esecuzione standard prevede il grado di protezione IP54. In opzione il motore autofrenante tipo FD viene fornito con grado di protezione **IP55**, prevedendo le seguenti varianti costruttive:

- ① anello V-ring posizionato sull'albero motore N.D.E.
- ② protezione in gomma impermeabile e antipolvere
- ③ anello in acciaio inox interposto tra scudo motore e disco freno
- ④ mozzo trascinatore in acciaio inox
- ⑤ disco freno in acciaio inox

M6.2 Alimentazione freno FD

L'alimentazione della bobina freno in c.c. è prevista per mezzo di opportuno raddrizzatore montato all'interno della scatola coprिमorsetti e già cablato alla bobina del freno. Per motori a singola polarità è inoltre previsto di serie il collegamento del raddrizzatore alla morsetteria motore.

Indipendentemente dalla frequenza di rete, la tensione standard di alimentazione del raddrizzatore V_B ha il valore indicato nella tabella qui di seguito:

(F 27)

2, 4, 6 P			1 speed		
		BN_FD / M_FD		alimentazione freno da morsetteria	alimentazione separata
		$V_{mot} \pm 10\%$ 3 ~	$V_B \pm 10\%$ 1 ~		
BN 63...BN 132	M05...M4LB	230/400 V – 50 Hz	230 V	standard	specificare V_B SA o V_B SD
BN 160...BN 200	M4LC...M5	400/690 V – 50 Hz	400 V	standard	specificare V_B SA o V_B SD

Per i motori a doppia polarità l'alimentazione standard del freno è da linea separata con tensione d'ingresso al raddrizzatore V_B come indicato nella tabella qui di seguito:

(F 28)

2/4, 2/6, 2/8, 2/12, 4/6, 4/8 P			2 speed		
		BN_FD / M_FD		alimentazione freno da morsetteria	alimentazione separata
		$V_{mot} \pm 10\%$ 3 ~	$V_B \pm 10\%$ 1 ~		
BN 63...BN 132	M05...M4LB	400 V – 50 Hz	230 V		specificare V_B SA o V_B SD

Il raddrizzatore è del tipo a diodi a semionda ($V_{c.c} \approx 0,45 \times V_{c.a.}$) ed è disponibile nelle versioni **NB**, **SB**, **NBR** e **SBR**, come dettagliato nella tabella seguente:

(F 29)

		freno		
			standard	a richiesta
BN 63	M05	FD 02		
BN 71	M1	FD 03 FD 53		
BN 80	M2	FD 04		
BN 90S	—	FD 14		
BN 90L	—	FD 05		
BN 100	M3	FD 15		
—		FD 55		
BN 112	—	FD 06S		
BN 132 - BN 160MR	M4	FD 56 FD 06 FD 07		
BN 160L - BN 180M	M5	FD 08		
BN 180L - BN 200M	—	FD 09		

(*) $t_{2c} < t_{2r} < t_2$

Il raddrizzatore **SB** a controllo elettronico dell'eccitazione, riduce i tempi di sblocco del freno sovrecitando l'elettromagnete nei primi istanti d'inserzione, per passare poi al normale funzionamento a semionda a distacco del freno avvenuto.

L'impiego del raddrizzatore tipo **SB** è sempre da prevedere nei casi di:

- elevato numero di interventi orari
- tempi di sblocco freno ridotti
- elevate sollecitazioni termiche del freno

Per applicazioni dove è richiesto un rapido intervento (ripristino della condizione frenante) del freno sono disponibili a richiesta i raddrizzatori **NBR** o **SBR**.

Questi raddrizzatori completano i tipi **NB** e **SB**, integrando nel circuito elettronico un interruttore statico che interviene diseccitando rapidamente il freno in caso di mancanza di tensione.

Questa soluzione consente di ridurre i tempi di rilascio del freno evitando ulteriori cablaggi e contatti esterni.

Per il migliore utilizzo dei raddrizzatori **NBR** e **SBR** è richiesta l'alimentazione separata del freno.

Tensioni disponibili: 230Vac ±10%, 400Vac ± 10%, 50/60 Hz (con alimentatore); 100Vdc ±10%, 180Vdc ± 10% (con opzione SD).

M6.3 Dati tecnici freni FD

Nella tabella sottostante sono riportati i dati tecnici dei freni in c.c. tipo FD.

(F 30)

Freno	Coppia frenante M_b [Nm]			Rilascio		Frenatura		W_{max} per frenata			W [MJ]	P [W]
	molle			t_1	t_{1s}	t_2	t_{2c}	[J]

* valori di coppia frenante ottenuti con n° 9, 7, 6 molle rispettivamente

** valori di coppia frenante ottenuti con n° 12, 9, 6 molle rispettivamente

- t_1 = tempo di rilascio del freno con alimentatore a semionda
- t_{1s} = tempo di rilascio del freno con alimentatore a controllo elettronico dell'eccitazione
- t_2 = ritardo di frenatura con interruzione lato c.a. e alimentazione separata
- t_{2c} = ritardo di frenatura con interruzione lato c.a. e c.c. – I valori di t_1 , t_{1s} , t_2 , t_{2c} indicati nella tabella sono riferiti al freno tarato alla coppia massima, traferro medio e tensione nominale
- W_{max} = energia max per frenata
- W = energia di frenatura tra due regolazioni successive del traferro
- P_b = potenza assorbita dal freno a 20°C
- M_b = coppia frenante statica (±15%)
- s/h = avviamenti orari

L'usura delle guarnizioni di attrito è funzione delle condizioni operative (temperatura, umidità, velocità di slittamento, pressione specifica); i valori di usura devono pertanto essere considerati come indicativi.

M6.4 Collegamenti freno FD

I motori standard ad una velocità sono forniti con il collegamento del raddrizzatore alla morsetteria motore già realizzato in fabbrica.

Per motori a 2 velocità, e dove è richiesta l'alimentazione del freno separata, prevedere il collegamento al raddrizzatore in accordo alla tensione freno VB indicata nella targhetta del motore.

Data la natura induttiva del carico, per il comando del freno e per l'interruzione lato corrente continua devono essere utilizzati contatti con categoria d'impiego AC-3 secondo IEC 60947-4-1.

Tabella (F31) - Alimentazione freno dai morsetti motore ed interruzione lato a.c.

Tempo di arresto t_2 ritardato e funzione delle costanti di tempo del motore. Da prevedere quando sono richiesti avviamenti/arresti progressivi.

Tabella (F32) - Bobina freno con alimentazione separata ed interruzione lato c.a.

Tempo di arresto normale ed indipendente dal motore.

Si realizzano i tempi di arresto t_2 indicati nella tabella (F30).

Tabella (F33) - Bobina freno con alimentazione dai morsetti motore ed interruzione lato c.a. e c.c.

Arresto rapido con i tempi d'intervento t_{2c} indicati in tabella (F30).

Tabella (F34) - Bobina freno con alimentazione separata ed interruzione lato c.a. e c.c.

Tempo di arresto ridotto secondo i valori t_{2c} indicati in tabella (F30).

L'alimentazione del freno direttamente dalla morsetteria del motore (da tab. F31 a tab. F34) è possibile solo quando la tensione nominale del freno corrisponde alla tensione minore del motore.

(F 31)

(F 32)

(F 33)

(F 34)

M7 MOTORI AUTOFRENANTI IN C.A., TIPO BN_FA e M_FA

Grandezze: BN 63 ... BN 180M / M05 ... M5

(F 35)

(F 36)

Freno elettromagnetico con alimentazione in **corrente alternata** trifase, fissato con viti allo scudo motore; le molle di precarico realizzano il posizionamento assiale del corpo magnete.

Il disco freno è scorrevole assialmente sul mozzo trascinatore in acciaio calettato sull'albero e provvisto di dispositivo antivibrazione.

La coppia frenante è pre-impostata in fabbrica su valori che sono indicati nelle tabelle dati tecnici dei relativi motori.

L'azione del freno è inoltre modulabile, regolando con continuità la coppia frenante, tramite le viti che realizzano il precarico delle molle; il campo di regolazione della coppia è: $30\% M_{bMAX} < M_b < M_{bMAX}$ (M_{bMAX} è il momento frenante max riportato in tab. (F38).

Il freno tipo FA presenta dinamiche molto elevate che lo rendono idoneo in applicazioni dove sono richieste frequenze di avviamento elevate con tempi d'intervento molto rapidi.

A richiesta, i motori possono essere previsti di leva per lo sblocco manuale con ritorno automatico (**R**). Per la posizione angolare della leva di sblocco vedi descrizione della relativa variante al paragrafo "SISTEMI DI SBLOCCO FRENO".

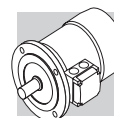

Per applicazioni che prevedono sollevamenti e/o elevati valori di lavoro orario smaltibile, contattare il servizio tecnico commerciale.

M7.1 Grado di protezione

L'esecuzione standard prevede il grado di protezione IP54.

In opzione, il motore autofrenante FA viene fornito con grado di protezione **IP55** prevedendo le seguenti varianti costruttive:

- ① anello V-ring posizionato sull'albero motore N.D.E.
- ② protezione in gomma impermeabile e antipolvere
- ③ anello O-ring

M7.2 Alimentazione freno FA

Nei motori a singola polarità l'alimentazione della bobina freno è derivata direttamente dalla morsettiera motore e la tensione del freno quindi coincide con la tensione del motore. In questo caso la tensione del freno può essere omessa dalla designazione

Per i motori a doppia polarità, e per i motori con alimentazione separata del freno, è presente una morsettiera ausiliaria con 6 terminali per il collegamento alla linea del freno. In entrambi i casi il valore di tensione del freno dovrà essere specificato in designazione.

Nella tabella seguente sono riportate le condizioni di alimentazione standard del freno in c.a. per i motori a singola e doppia polarità:

(F 37)

motori a singola polarità	BN 63...BN 132	BN 160...BN 180
	M05...M4LB	M4LC...M5
	230Δ / 400Y V ±10% – 50 Hz	400Δ/ 690Y V ±10% – 50 Hz
	265Δ / 460Y ±10% - 60 Hz	460Y – 60 Hz
motori a doppia polarità (alimentazione da linea separata)	BN 63...BN 132	
	M05...M4	
	230Δ / 400Y V ±10% – 50 Hz	
	460Y - 60 Hz	

Se non diversamente specificato, l'alimentazione standard del freno è 230Δ /400Y V - 50 Hz.

Su richiesta, sono disponibili tensioni speciali, nel campo 24...690 V, 50-60 Hz.

M7.3 Dati tecnici freni FA

(F 38)

Freno	Coppia frenante M_b [Nm]	Rilascio t_1 [ms]	Frenatura t_2 [ms]	W_{max} [J]			W [MJ]	P [VA]
				10 s/h	100 s/h	1000 s/h		
FA 02	3.5	4	20	4500	1400	180	15	60
FA 03	7.5	4	40	7000	1900	230	25	80
FA 04	15	6	60	10000	3100	350	30	110
FA 14								
FA 05	40	8	90	18000	4500	500	50	250
FA 15								
FA 06S	60	16	120	20000	4800	550	70	470
FA 06	75	16	140	29000	7400	800	80	550
FA 07	150	16	180	40000	9300	1000	130	600
FA 08	250	20	200	60000	14000	1500	230	1200

M_b = max coppia frenante statica (±15%)

t_1 = tempo di rilascio freno

t_2 = ritardo di frenatura

W_{max} = energia max per frenata (capacità termica del freno)

W = energia di frenatura tra due regolazioni successive del traferro

P_b = potenza assorbita dal freno a 20° (50 Hz)

s/h = avviamenti orari

N.B.

I valori di t_1 e t_2 riportati in tabella sono riferiti al freno tarato alla coppia nominale, traferro medio e tensione nominale.

L'usura delle guarnizioni di attrito è funzione delle condizioni operative (temperatura, umidità, velocità di slittamento, pressione specifica); i valori di usura devono pertanto essere considerati come indicativi.

M7.4 Collegamenti freno FA

Per i motori con alimentazione del freno derivata direttamente dall'alimentazione motore i collegamenti alla morsettiera corrispondono a quanto riportato nello schema seguente:

(F 39)

Per i motori a doppia polarità e, quando richiesto, per i motori ad una velocità con alimentazione da linea separata è prevista una morsettiera ausiliaria a 6 morsetti per il collegamento del freno; in questa esecuzione i motori prevedono la scatola coprimorsetti maggiorata. Vedi schema seguente:

(F 40)

M8 SISTEMI DI SBLOCCO FRENO

I freni a pressione di molle tipo FD e FA possono essere dotati opzionalmente di dispositivi per lo sblocco manuale del freno, normalmente utilizzati per condurre interventi di manutenzione sulle parti di macchina, o dell'impianto, comandate dal motore.

(F 41)

R

La leva di sblocco è dotata di ritorno automatico, tramite dispositivo a molla.

(F 42)

RM

Sui motori tipo BN_FD la leva di sblocco può essere temporaneamente bloccata in posizione di rilascio del freno, avvitando la stessa fino ad impegnare l'estremità in un risalto del corpo del freno. La disponibilità dei sistemi di sblocco freno è diversa per i vari tipi di motore, ed è descritta dalla tabella seguente:

(F 43)

	R	RM
BN_FD	BN 63...BN 200	2p 63A2 ≤ H ≤ 132M2 4p 63A4 ≤ H ≤ 132MA4 6p 63A6 ≤ H ≤ 132MA6
M_FD	M 05...M 5	M 05...M 4LA
BN_FA	BN 63...BN 180M	●
M_FA	M 05...M 5	

M8.1 Orientamento della leva di sblocco

Per entrambe le opzioni **R** e **RM**, la leva di sblocco del freno viene collocata, se non diversamente specificato, con orientamento di 90° in senso orario, rispetto alla posizione della morsetteria - riferimento **[AB]** nel disegno sottostante. Orientamenti alternativi, tipo **[AA]**, **[AC]** e **[AD]** possono essere richiesti citandone la relativa specifica:

(F 44)

M8.2 Caratteristiche volani (F1)

La tabella seguente riporta il peso e l'inerzia aggiuntiva del volani che possono essere richiesti tramite l'opzione F1. Le dimensioni complessive rimangono invariate.

(F 45)

Dati tecnici volano per motori tipo: BN_FD, M_FD			
		Peso volano [Kg]	Inerzia volano [Kgm ²]
BN 63	M05	0.69	0.00063
BN 71	M1	1.13	0.00135
BN 80	M2	1.67	0.00270
BN 90 S - BN 90 L	-	2.51	0.00530
BN 100	M3	3.48	0.00840
BN 112	-	4.82	0.01483
BN 132 S - BN 132 M	M4	6.19	0.02580

M9 OPZIONI

M9.1 Protezioni termiche

Oltre alla protezione garantita dall'interruttore magnetotermico, i motori possono essere provvisti di sonde termiche incorporate per proteggere l'avvolgimento da eccessivo riscaldamento dovuto a scarsa ventilazione o servizio intermittente.

Questa protezione dovrebbe sempre essere prevista per motori servoventilati (IC416).

M9.2 Filtro capacitivo

CF

Per i soli motori autofrenanti in corrente continua, tipo BN_FD è disponibile in opzione il filtro capacitivo. Se corredati dell'opportuno filtro capacitivo a monte del raddrizzatore (opzione CF) i motori rientrano nei limiti di emissione previsti dalla Norma EN 61000-6-3:2007 "Compatibilità elettromagnetica – Norma Generica sull'emissione – Parte 6-3: Ambienti residenziali, commerciali e dell'industria leggera".

M9.3 Sonde termiche a termistori

E3

Sono dei semiconduttori che presentano una rapida variazione di resistenza in prossimità della temperatura nominale di intervento (150 °C).

L'andamento della caratteristica $R = f(T)$ è normalizzato dalle Norme DIN 44081, IEC 34-11.

In genere vengono impiegati termistori a coefficiente di temperatura positivo denominati anche "resistori a conduttore freddo" PTC. I termistori non possono comandare direttamente i relais e devono pertanto essere collegati ad un'adeguata apparecchiatura di sgancio.

Con questa protezione vengono inseriti tre PTC, (collegati in serie), nell'avvolgimento con terminali disponibili in morsettiera ausiliaria.

K1

Sono un sottogruppo dei termistori PTC le cui caratteristiche costruttive ne permettono l'impiego come sensori di temperatura aventi un coefficiente di temperatura positivo funzione della resistenza. La temperatura di esercizio è: 0°C ... +260°C.

I termistori non possono comandare direttamente i relais e devono pertanto essere collegati ad un'adeguata apparecchiatura di sgancio.

I terminali (polarizzati) di n.1 KTY 84-130 sono disponibili in una morsettiera ausiliaria.

M9.4 Sonde termiche bimetalliche

D3

I protettori di questo tipo contengono all'interno di un involucro un disco bimetallico che, raggiunta la temperatura nominale di intervento (150 °C), commuta i contatti dalla posizione di riposo.

Con la diminuzione della temperatura, il disco e i contatti riprendono automaticamente la posizione di riposo.

Normalmente si impiegano tre sonde bimetalliche in serie con contatti normalmente chiusi e terminali disponibili in una morsettiera ausiliaria.

M9.5 Motore con connettore

CON

Sono disponibili tre tipi di connettori (CON 1, CON 2, CON 3) che possono essere installati in due posizioni di montaggio: lato destro scatola coprimorsettiera (C1D, C2D, C3D); lato sinistro scatola coprimorsettiera (C1S, C2S, C3S).

L'opzione CON è prevista per i motori BN e M a singola polarità (2, 4, 6, 8, poli) nelle grandezze indicate nella tabella seguente. Sono escluse tutte le versioni con doppia polarità. I connettori sono disponibili per i motori BN e M nella versione senza freno e per i motori autofrenanti BN e M dotati di freno in corrente continua FD, nelle grandezze indicate nella tabella seguente.

Sul motore è fissato il connettore maschio (dotato di pin), il connettore femmina è escluso dalla fornitura.

Con l'opzione CON è sempre previsto il collegamento a Y delle fasi.

Per motori provvisti di servoventilazione (opzione U1) l'alimentazione del ventilatore è prevista nella scatola morsettiera separata fissata al copriventola.

Nei motori dotati di encoder (opzioni EN1...EN6) i terminali della connessione dell'encoder avviene tramite cavo volante non connesso al connettore.

L'opzione CON non è applicabile ai motori dotati di freno in corrente alternata FA.

L'opzione CON non è compatibile con le opzioni U2, CUS, IC.

M9.6 Controllo della funzionalità del freno

MSW

Il microinterruttore può essere regolato per segnalare l'attrazione/rilascio dell'ancora mobile o per segnalare il raggiungimento del massimo valore ammissibile per il traferro.

L'opzione MSW è disponibile per i freni FD03...FD09.

Il microswitch è dotato di tre terminali NC, NO, COM. Nella figura sottostante sono raffigurati i principali componenti del freno equipaggiato con microswitch.

(F 52)

- A: Viti di fissaggio
- B: Vite di regolazione
- C: Attuatore

M9.7 Ingresso cavi supplementare per motori autofrenanti

IC

Sulla scatola coprimorsettiera dei motori autofrenanti BN63...BN160MR / M05...M4 sono disponibili due ingressi cavo supplementari M16 x 1.5 (uno per lato).

Sulla scatola coprimorsettiera dei motori autofrenanti BN160...BN200 / M5 è disponibile un ingresso cavo supplementare M16 x 1.5 affiancato all'ingresso cavo freno.

M9.8 Riscaldatori anticondensa

H1

NH1

I motori funzionanti in ambienti molto umidi e/o in presenza di forti escursioni termiche, possono essere equipaggiati con una resistenza anti-condensa.

L'alimentazione monofase è prevista da morsettiera ausiliaria posta nella scatola principale.

Le potenze assorbite dalla resistenza elettrica sono elencate qui di seguito:

(F 53)

		H1	NH1
		1~ 230V ± 10% P [W]	1~ 115V ± 10% P [W]
BN 56...BN 80	M0...M2	10	10
BN 90...BN 160MR	M3 - M4	25	25
BN 160M...BN 180M	M5	50	50
BN 180L...BN 200L	—		

Importante! Durante il funzionamento del motore la resistenza anticondensa non deve mai essere inserita.

M9.9 Tropicalizzazione

TP

Su richiesta, mediante la specifica dell'opzione **TP**, gli avvolgimenti del motore ottengono una protezione aggiuntiva che li rende idonei al funzionamento in condizioni di elevata temperatura e umidità.

M9.10 Seconda estremità d'albero

PS

L'opzione esclude le varianti RC, TC, U1, U2, EN1, EN2, EN3, EN4, EN5, EN6. Le dimensioni sono reperibili nelle tavole dimensionali dei motori.

(F 54)

M9.11 Dispositivo antiritorno

AL

AR

Nelle applicazioni dove è necessario impedire la rotazione inversa del motore dovuta all'azione del carico, è possibile impiegare motori provvisti di un dispositivo antiritorno (disponibile solo sulla serie M). Questo dispositivo, pur consentendo la libera rotazione nel senso di marcia, interviene istantaneamente in caso di mancanza di alimentazione bloccando la rotazione dell'albero nel senso inverso. Il dispositivo antiritorno è lubrificato a vita con grasso specifico per questa applicazione. In fase di ordine dovrà essere indicato chiaramente il senso di marcia previsto.

In nessun caso il dispositivo antiritorno dovrà essere utilizzato per impedire la rotazione inversa nel caso di collegamento elettrico errato. Nella tabella (F55) sono indicate le coppie nominale e massima di bloccaggio attribuite ai dispositivi antiritorno utilizzati, mentre la raffigurazione schematica del dispositivo è inserita nella tabella (F56). Le dimensioni sono le stesse del motore autofrenante. Il senso di rotazione libera è descritto nel paragrafo "OPZIONI MOTORI" delle specifiche sezioni dedicate ai riduttori.

(F 55)

	Coppia nominale di bloccaggio	Coppia max. di bloccaggio	Velocità di distacco
	[Nm]	[Nm]	[min ⁻¹]
M1	6	10	750
M2	16	27	650
M3	54	92	520
M4	110	205	430

(F 56)

M9.12 Ventilazione

I motori sono raffreddati mediante ventilazione esterna (IC 411 secondo CEI EN 60034-6) e sono provvisti di ventola radiale in plastica, funzionante in entrambi i versi di rotazione.

L'installazione dovrà assicurare una distanza minima della calotta copriventola dalla parete più vicina, in modo da non creare impedimento alla circolazione dell'aria, oltre che permettere l'esecuzione della manutenzione ordinaria del motore e, se presente, del freno.

Su richiesta, a partire dalle grandezze BN 71, oppure M1, i motori possono essere forniti con ventilazione forzata ad alimentazione indipendente. Il raffreddamento è realizzato per mezzo di un ventilatore assiale con alimentazione indipendente, montato sulla calotta copriventola (metodo di raffreddamento IC 416).

Questa esecuzione è utilizzata in caso di alimentazione del motore tramite inverter allo scopo di estendere il campo di funzionamento a coppia costante anche a bassa velocità, o quando per lo stesso sono richieste elevate frequenze di avviamento.

Da questa opzione sono esclusi tutti i motori con doppia sporgenza d'albero (opzione PS).

(F 57)

Dati di alimentazione					
		V a.c. ± 10%	Hz	P [W]	I [A]
BN 71	M1	1~ 230	50 / 60	22	0.12
BN 80	M2			22	0.12
BN 90	—			40	0.30
BN 100 (*)	M3			50	0.25
BN 112	—	3~ 230 Δ / 400Y		50	0.26 / 0.15
BN 132S	M4S		110	0.38 / 0.22	
BN 132M...BN 160MR	M4L				
BN 160...BN 180M	M5		50	1.25 / 0.72	

Per la variante sono disponibili due esecuzioni alternative, denominate **U1** e **U2**, aventi lo stesso ingombro in senso longitudinale. Per entrambe le esecuzioni, la maggiore lunghezza della calotta copriventola (ΔL) è riportata nella tabella che segue. Dimensioni complessive ricavabili dalle tavole dimensionali dei motori.

(F 58)

Tabella maggiorazione lunghezze motore			
		ΔL_1	ΔL_2
BN 71	M1	93	32
BN 80	M2	127	55
BN 90	—	131	48

BN 112	—	130	31
BN 132S	M4S	161	51
BN 132M	M4L	161	51

ΔL_1 = variazione dimensionale rispetto alla quota LB del motore standard corrispondente

ΔL_2 = variazione dimensionale rispetto alla quota LB del motore autofrenante corrispondente

U1

Terminali di alimentazione del ventilatore in scatola morsetti separata.

Nei motori autofrenanti grandezza BN 71...BN 160MR, M1...M4L, con variante **U1**, la leva di sblocco non è collocabile nella posizione AA.

L'opzione non è disponibile per i motori conformi alle norme CSA e UL (opzione CUS).

U2

I terminali del ventilatore sono collocati nella scatola morsettiera principale del motore. L'opzione **U2** non è applicabile ai motori da BN 160 a BN 200L, M5, con eccezione dei motori BN 160MR, per i quali l'opzione è disponibile e ai motori con opzione CUS (conformi alle norme CSA e UL).

(F 59)

M9.13 Tettuccio parapiovvia

RC

Il dispositivo parapiovvia, che è raccomandato quando il motore è montato verticalmente con l'albero verso il basso, serve a proteggere il motore stesso dall'ingresso di corpi solidi e dallo stilloccidio.

Le dimensioni aggiuntive sono indicate nella tabella sottostante.

Il tettuccio esclude le varianti PS, EN1, EN2, EN3, EN4, EN5, EN6.

(F 60)

		AQ	ΔV	
BN 63	M05	118	24

BN 160M...BN 180M	M5	302	36	
BN 180L...BN 200L	—	340	36	

M9.14 Tettuccio tessile

TC

La variante del tettuccio tipo TC è da specificare quando il motore è installato in ambienti dell'industria tessile, dove sono presenti filamenti che potrebbero ostruire la griglia del copriventola, impedendo il regolare flusso dell'aria di raffreddamento.

L'opzione esclude le varianti EN1, EN2, EN3, EN4, EN5, EN6. L'ingombro complessivo è lo stesso del tettuccio tipo RC.

M9.15 Dispositivi di retroazione

I motori possono essere dotati di sei diversi tipi di encoder, qui di seguito descritti.

Il montaggio dell'encoder esclude le esecuzioni con doppia estremità d'albero (PS) e tettuccio di protezione (RC, TC).

EN1

Encoder incrementale, $V_{IN} = 5 V$, uscita line-driver RS 422.

EN2

Encoder incrementale, $V_{IN} = 10-30 V$, uscita line driver RS 422.

EN3

Encoder incrementale, $V_{IN} = 12-30 V$, uscita push-pull 12-30 V

EN4

Encoder sin/cos, $V_{IN} = 4.5-5.5$ V, uscita Sinus $0.5V_{PP}$.

EN5

Encoder assoluto monogiro, interfaccia HIPERFACE®, $V_{IN} = 7-12$ V.

EN6

Encoder assoluto multigiro, interfaccia HIPERFACE®, $V_{IN} = 7-12$ V.

(F 61)

	EN1	EN2	EN3	EN4	EN5	EN6
interfaccia	TTL/RS 422	TTL/RS 422	HTL/push-pull	Sinus 0.5 VPP	HIPERFACE®	HIPERFACE®

BN 160M_FD...BN 180M_FD	M5_FD	35
BN 180L_FD...BN 200L_FD	-	41

Se l'opzione EN_ è richiesta per motori di grandezza BN71...BN160MR / M1...M4, contemporaneamente all'opzione U1/U2, le variazioni dimensionali coincidono con quelle dell'opzione U1/U2.

M9.16 Protezione superficiale

C_

I motori, che laddove non viene richiesta una classe di protezione specifica, nelle zone verniciate (ferrose) rispettano come requisito minimo la classe di protezione C2 (UNI EN ISO 12944-2), sono forniti con protezione superficiale C3 e C4 per una migliore resistenza alla corrosione atmosferica.

PROTEZIONE SUPERFICIALE	Ambienti tipici	Temperatura superficiale max.	Classe di corrosività secondo UNI EN ISO 12944-2
C3	Ambienti urbani ed industriali, con umidità relativa dell'aria max. 100% (inquinamento ambientale medio)	120°C	C3
C4	Aree industriali, zone costiere, impianti chimici, con umidità relativa dell'aria max. 100% (inquinamento ambientale alto)	120°C	C4

I motori previsti con le protezioni opzionali C3 e C4 sono disponibili in diverse tinte.

Se non specificata nessuna tinta (vedere opzione "VERNICIATURA") la fornitura viene eseguita con la tinta RAL7042.

A richiesta sono fornibili motori per classe di corrosività C5 secondo UNI EN ISO 12944-2, contattando il ns. Servizio tecnico-Commerciale.

M9.17 Verniciatura

RAL_

I motori previsti con le protezioni opzionali C3 e C4 sono disponibili in diverse tinte, secondo la tabella seguente.

VERNICIATURA	Colore	Catalogazione RAL
RAL7042*	Grigio traffico A	7042
RAL5010	Blu genziana	5010
RAL9005	Nero intenso	9005
RAL9006	Alluminio brillante	9006
RAL9010	Bianco puro	9010

* Colore di fornitura standard se non specificato diversamente

NOTA - L'opzione "VERNICIATURA" è configurabile esclusivamente in abbinamento con l'opzione "PROTEZIONE SUPERFICIALE".

M9.18 Prove documentali

ACM

Attestato di conformità motori

Documento il cui rilascio attesta la conformità del prodotto all'ordinativo e la costruzione dello stesso in conformità alle procedure standard di processo e di controllo previste dal sistema di Qualità Bonfiglioli Riduttori.

CC

Certificato di collaudo

La specifica comporta la conduzione di verifiche di conformità all'ordine, controlli visivi generali e verifiche strumentali delle caratteristiche elettriche di funzionamento a vuoto. Il collaudo è riferito allo specifico motore analizzato ed applicato ad un campione statistico del lotto di spedizione.

INDICE DI REVISIONE

BR_CAT_VFW_STD_ITA_R07_2	
	Descrizione
96	Aggiornato predisposizioni motore per VF130_P112.
80, 82, 103, 104	Aggiornato dati tecnici e valori di inerzia per i riduttori WR 75 e WR 86 con predisposizione P90_B5.

2018_03_31

Questa pubblicazione annulla e sostituisce ogni precedente edizione o revisione. Ci riserviamo il diritto di apportare modifiche senza preavviso. È vietata la produzione anche parziale senza autorizzazione.

Abbiamo un inflessibile dedizione per
l'eccellenza, l'innovazione e la sostenibilità.
Il nostro Team crea, distribuisce e supporta soluzioni di
Trasmissioni e Controllo di Potenza per mantenere il mondo in
movimento.
